ProCam admin guide: setting up and running the business

Everything the admin does: sign in, set up the locations, merchants and fleet, watch the bookings, money, batteries, location traffic and where customers drop off, and manage what customers see and the messages they get. Screens are from the admin pages on a laptop-sized window, with the customer's view next to the things the admin sets up.

Part 1 · Sign in and find your way	2 screens
Part 2 · Locations, merchants and fleet	7 screens
Part 3 · Bookings and money	6 screens
Part 4 · Batteries, location traffic and where customers drop off	3 screens
Part 5 · What customers see, and the messages they get	5 screens

Part 1 · Sign in and find your way

Only the admin sees these pages. Merchants and customers cannot open them.

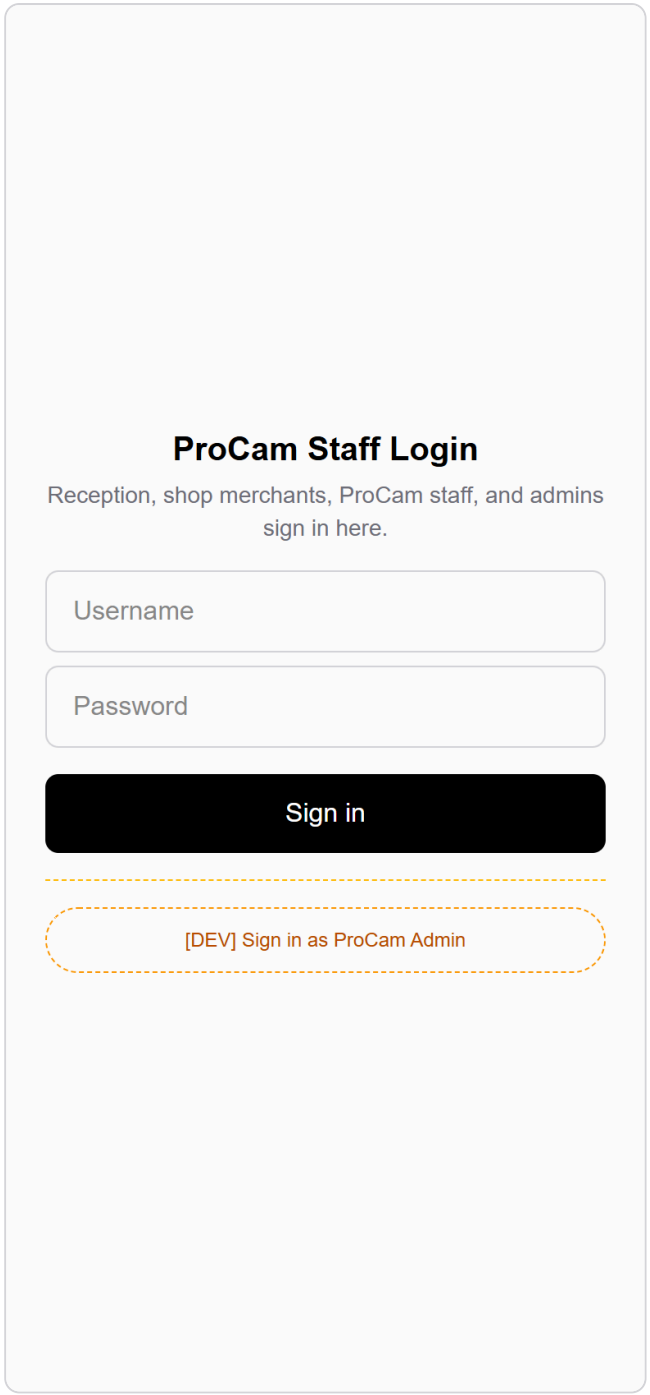

2 SCREENS

1

PART 1 · SIGN IN AND FIND YOUR WAY

Sign in

Sign in with your admin username and password. Merchants and the admin use the same login page and land on their own page.

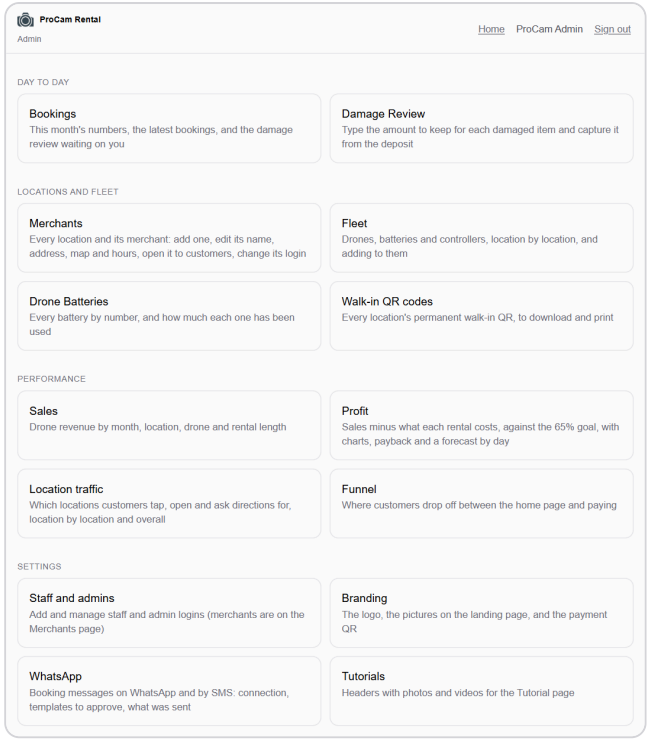

2

PART 1 · SIGN IN AND FIND YOUR WAY

Admin home

Four groups of tiles. Day to day: Bookings, and Damage Review. Locations and fleet: Merchants, Fleet, Drone Batteries, Walk-in QR codes. Performance: Sales, Profit, Location traffic and Funnel. Settings: Staff and admins, Branding, WhatsApp and Tutorials. The older hotel locker business is paused, so its tiles and pages are hidden.

Part 2 · Locations, merchants and fleet

A merchant is a location: you create them together. Then give the location its drones and batteries and open it to customers. Set these up once, then change them when something changes.

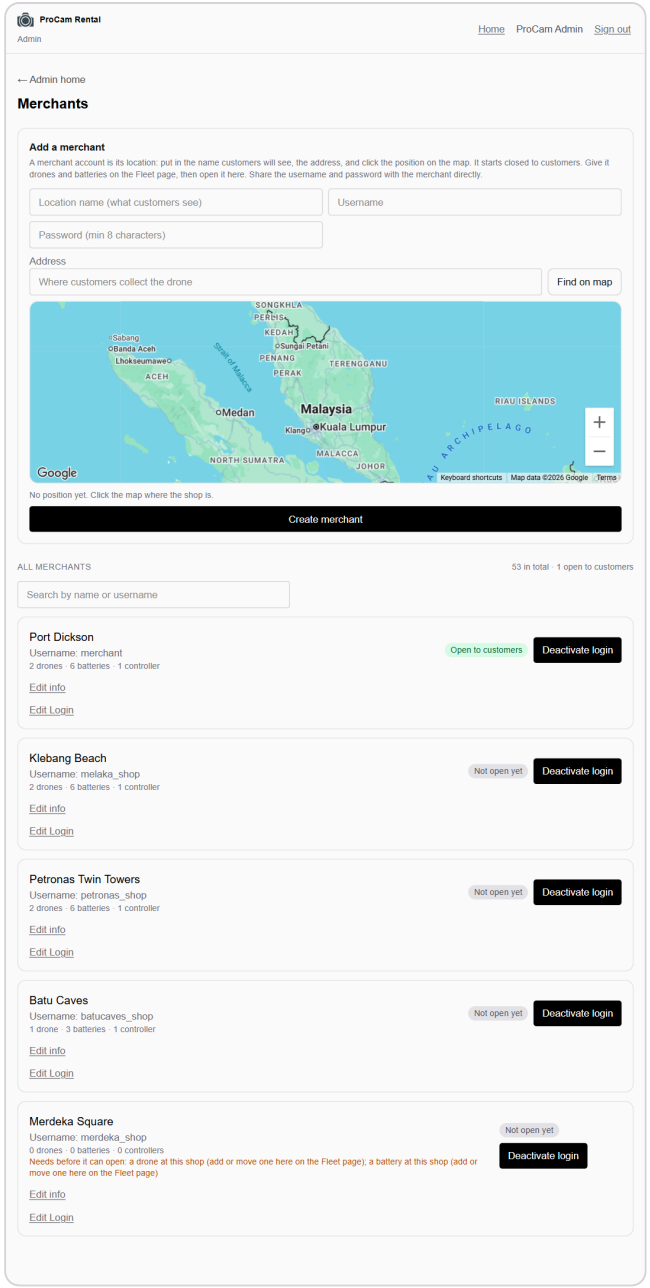

7 SCREENS

3

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Merchants

Every location and its merchant, with a search box. Add a merchant at the top: the name customers see, a username and password, and the address, then click the position on the map (Find on map looks the address up for you). It starts closed to customers. Each row shows its username, how many drones, batteries and controllers it has, whether it is open to customers, and what it still needs before it can open.

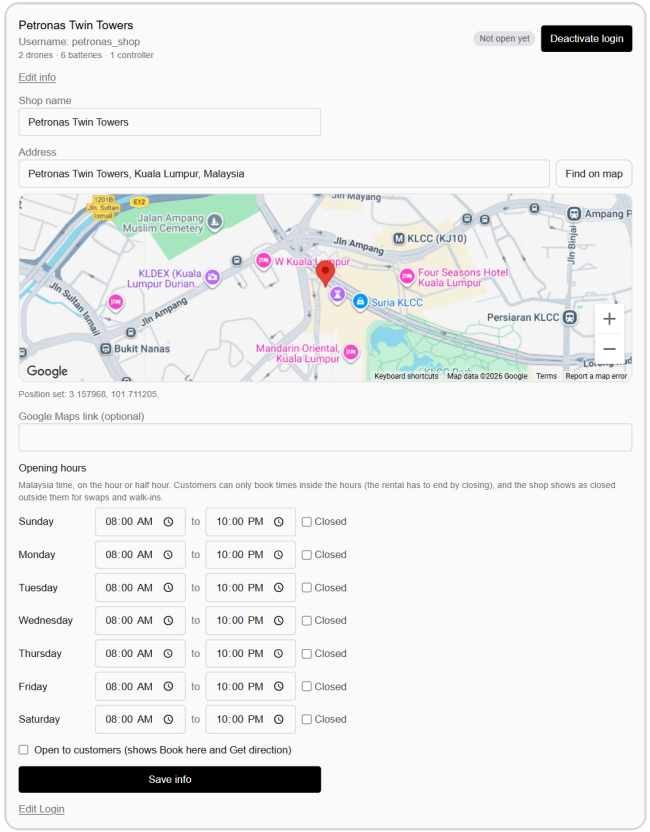

4

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Edit info

Open Edit info on a merchant to change its name, address, map position, opening hours and whether it is open to customers. The map only loads when you open the form. Edit Login changes the merchant's username or password: there is no self-service reset, you manage every login here.

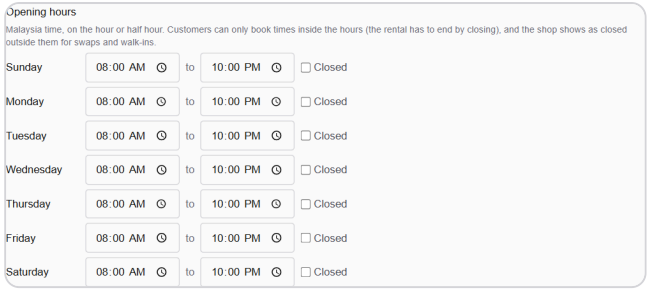

5

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Opening hours

For each location, set the opening and closing time for every weekday, or tick Closed, on the hour or half hour in Malaysia time. Customers can only book times inside the hours (the rental has to end by closing), a closed day offers no times, and a closed location shows as closed for battery swaps and walk-ins. Until you set them, a location is open 08:00 to 22:00 every day.

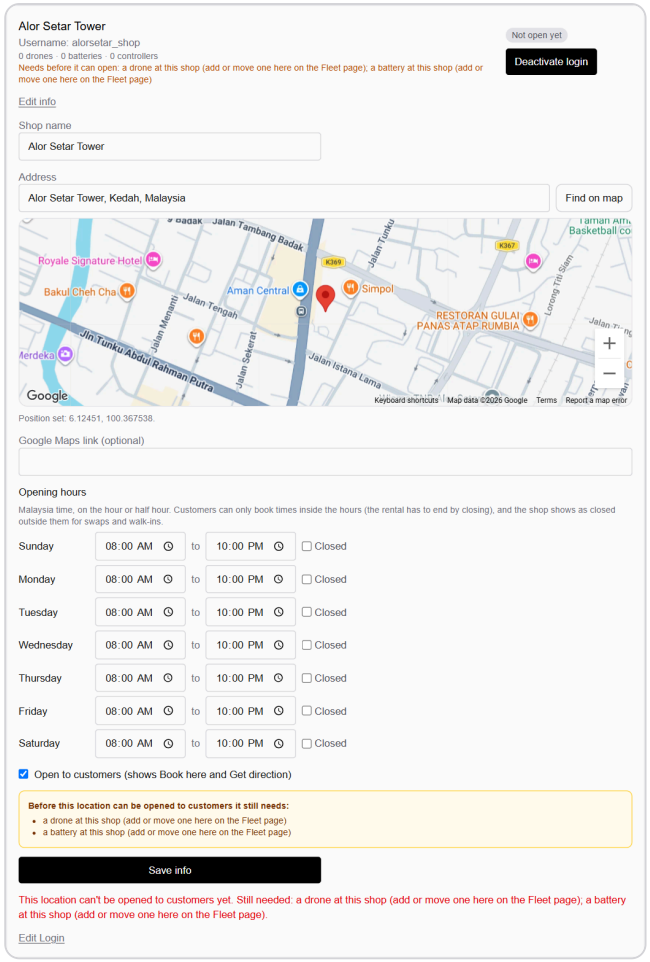

6

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Opening a location

Tick Open to customers and Save to open a location: it then shows Book here and Get direction on the shop list. It will not open until it has a real address and map position, an open day, a drone and a battery. If something is missing the save is refused and lists exactly what, in red; the amber box lists the same before you try.

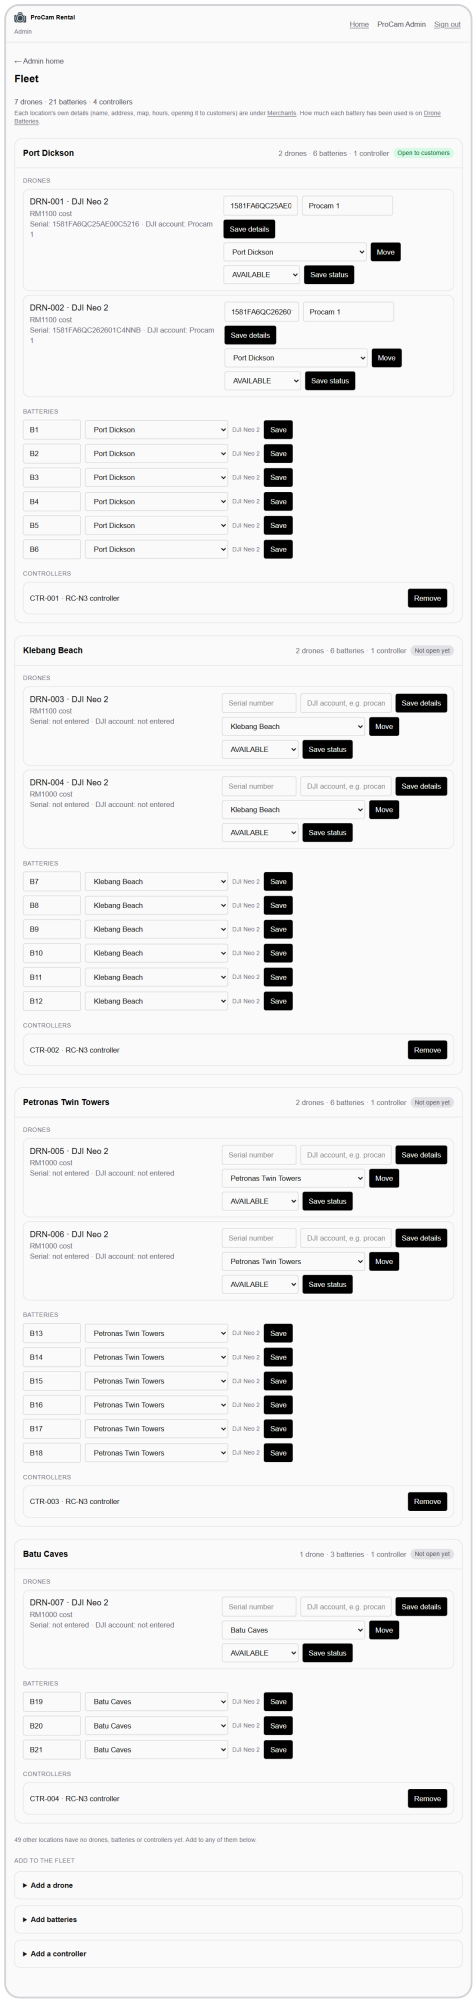

7

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Fleet

Drones, batteries and controllers, location by location, with the DJI account and serial number on each drone. Move a drone or a battery to another location, change a drone's status, and add to the fleet at the bottom. Batteries belong to a location, not to a drone, and every battery has its own number.

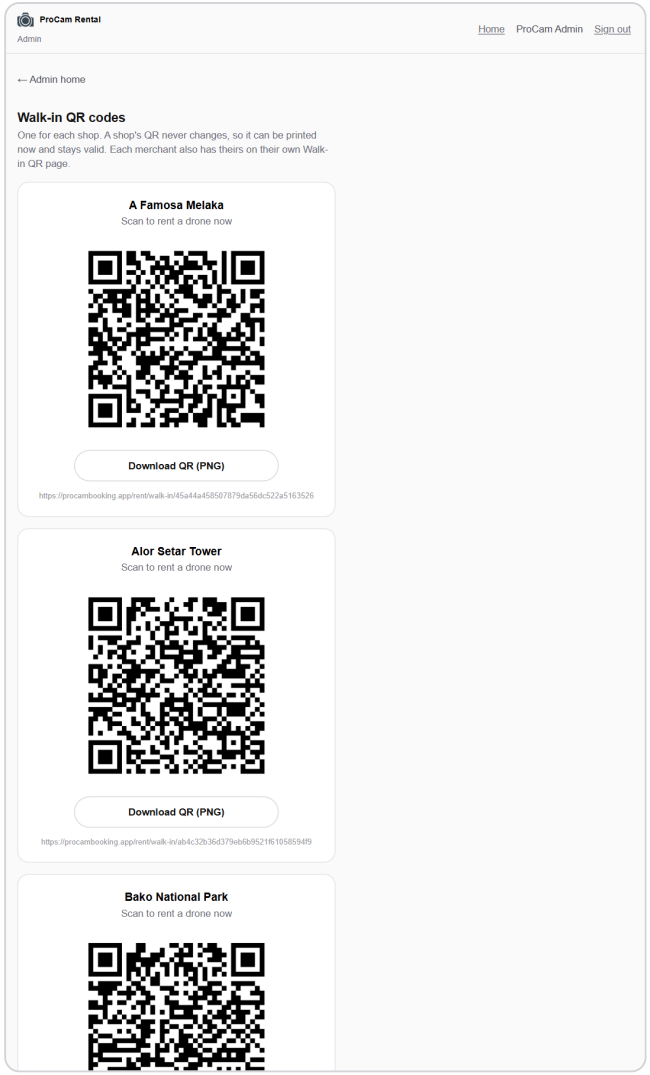

8

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Walk-in QR codes

Every location has its own walk-in QR that never changes, made from the location's permanent code. Download it as a PNG to print. A merchant has theirs on their own Walk-in QR page. Scanning the QR of a location that is not open yet shows its rates, like Check Rates.

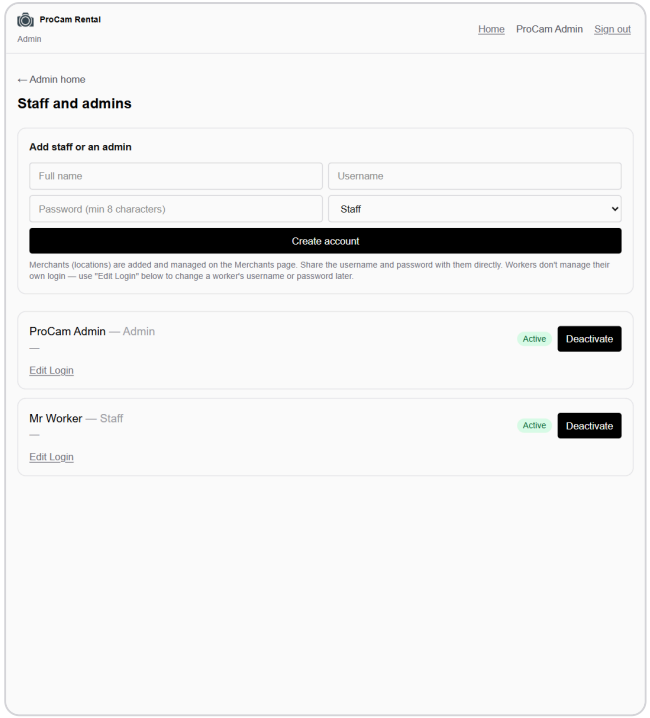

9

PART 2 · LOCATIONS, MERCHANTS AND FLEET

Staff and admins

Logins for staff and admins: a username, a name and a password. Merchants are on the Merchants page. There is no self-service password reset, you change a login with Edit Login.

Part 3 · Bookings and money

Drone revenue only. Card payments are Stripe's; cash is recorded by the merchant.

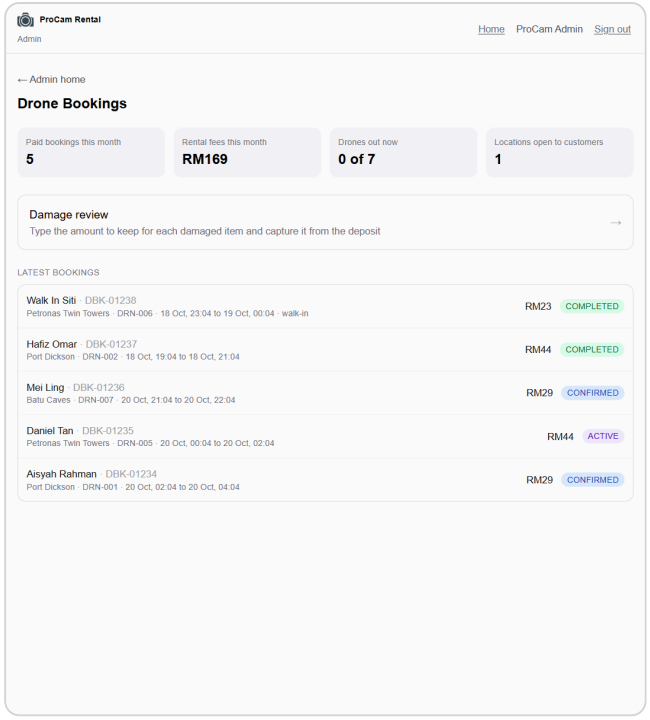

6 SCREENS

10

PART 3 · BOOKINGS AND MONEY

Bookings

This month in numbers (paid bookings, rental fees, drones out now, locations open) and the latest bookings with their location, drone, time and status. The Damage Review tile shows how many are waiting.

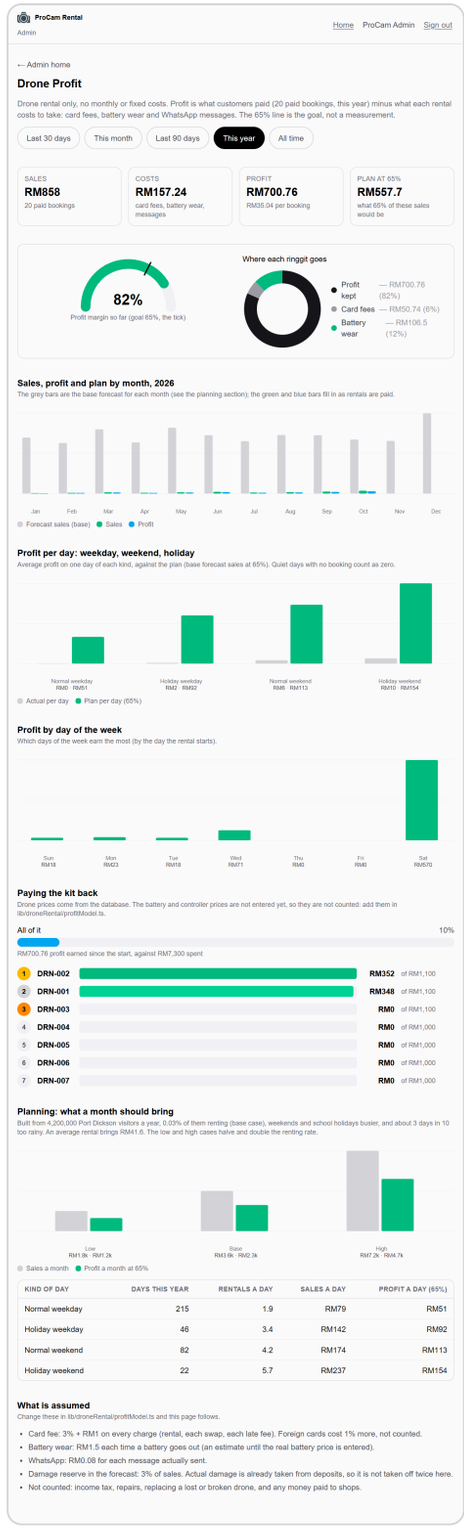

11

PART 3 · BOOKINGS AND MONEY

Drone Profit

What is left after what each rental costs to take, shown as charts: a dial against your 65% profit goal, where each ringgit goes (card fees, battery wear, messages), sales and profit by month against the forecast, profit per day for a normal weekday, holiday weekday, normal weekend and holiday weekend, and how far the drones have paid for themselves. The figures here are made-up examples. There are no monthly or fixed costs in it. Under it is the planning forecast, built from Port Dickson visitor numbers, school holidays and the weather: change its assumptions in the code and the page follows.

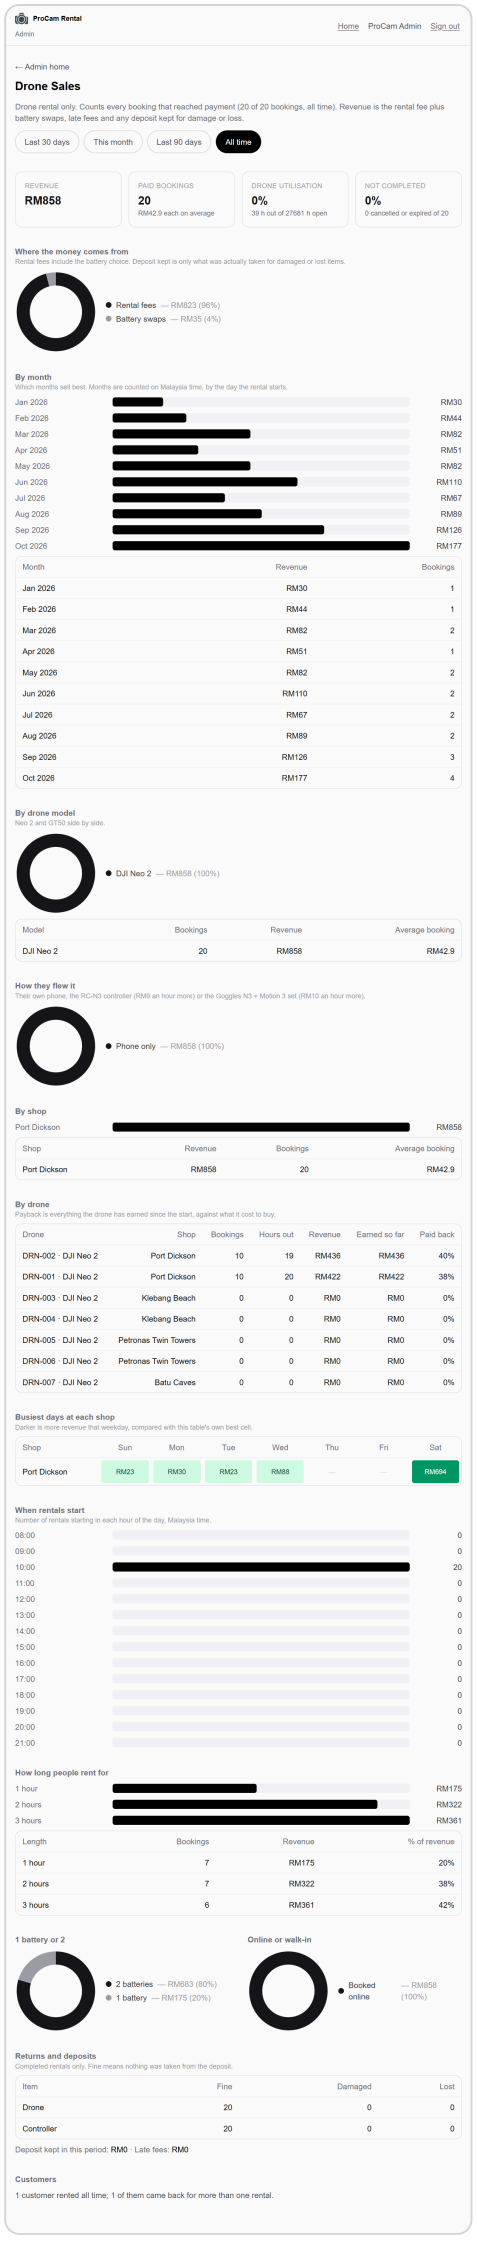

12

PART 3 · BOOKINGS AND MONEY

Drone Sales

Revenue by month, shop, drone and rental length, with how much was card and how much cash.

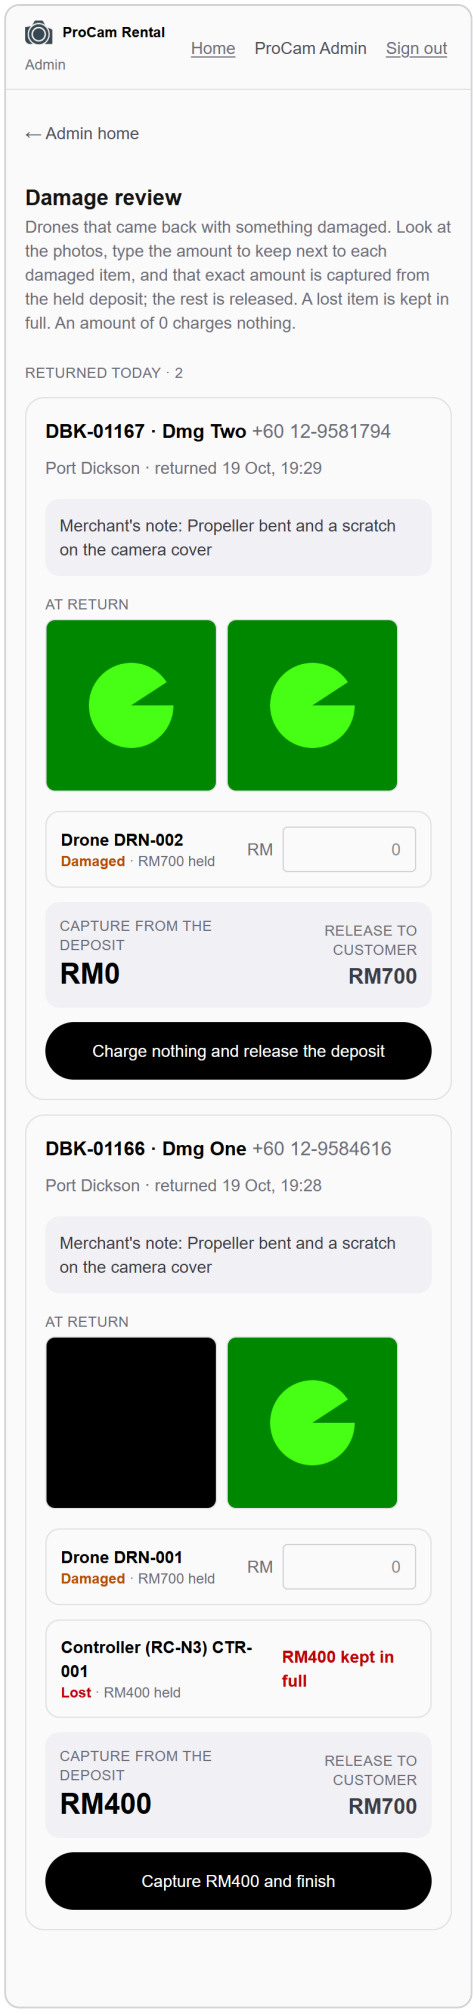

13

PART 3 · BOOKINGS AND MONEY

Damage review, every night

Returns where something was damaged wait here. The merchant only describes the damage at the return; the deposit stays held until you decide.

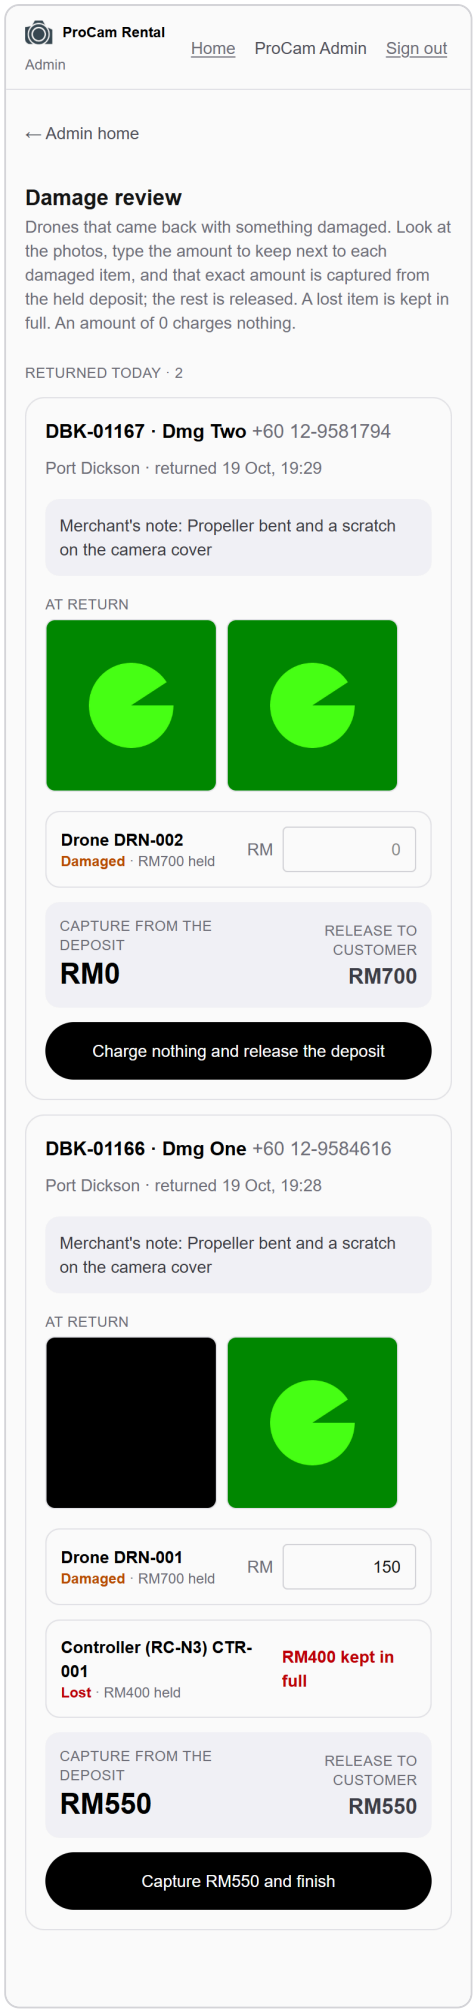

14

PART 3 · BOOKINGS AND MONEY

Type the amount, then capture

Type what to keep for each damaged item. That total is captured from the held deposit and the rest is released. A lost item is kept in full.

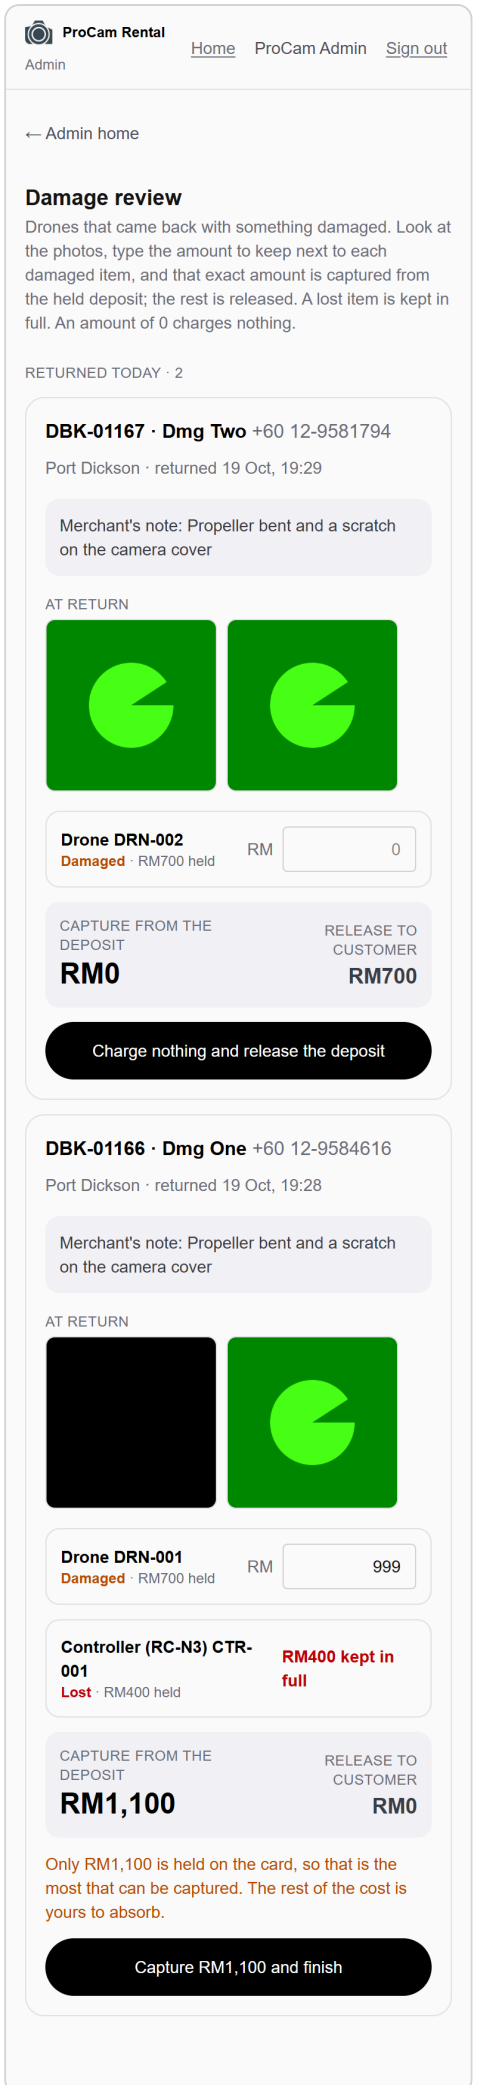

15

PART 3 · BOOKINGS AND MONEY

Damage above the deposit

If the repair costs more than the deposit that is held, only the held amount can be captured, and the screen says so.

Part 4 · Batteries, location traffic and where customers drop off

Both pages count from the day they went live.

3 SCREENS

16

PART 4 · BATTERIES, LOCATION TRAFFIC AND WHERE CUSTOMERS DROP OFF

Drone Batteries

Two ranking charts come first: the batteries ordered by how many times each went out with a customer, and by the hours each has spent out, with gold, silver and bronze for the three most used. Below them, every battery in one list, numbered with no number repeated (B for the Neo 2, N for the Neo). For each: where it is now, how many times it went out with a customer, the rentals it was on, how many of those were swaps, the hours it has spent out, and when it was last out. Rotate the batteries that are used least to keep the wear even. Change the stickers to match the numbers.

Drone batteries

Every battery in one list, numbered across all the shops so no number repeats (one running number per make: B for the Neo 2, N for the Neo). Counts come from the handout and swap records, so they start with the first rental recorded.

BATTERIES	TIMES HANDED OUT	HOURS OUT WITH CUSTOMERS	MOST USED
21	9	16 h	B4 · 2×

Least used: B5 (0×). Rotating the batteries that are used least keeps the wear even.

Ranking: most used first

How many times each battery has gone out with a customer. Gold, silver and bronze are the three most used; the least used ones sit at the bottom, ready to be rotated in.

1	B4	2×	2 times
2	B1	2×	2 times
3	B3	1×	1 time
4	B9	1×	1 time

Times used: how many times the battery went out with a customer, as a first handout or as a swap. Rentals: how many different rentals it was on. Swapped in: how many of those were swaps. Hours out: time with customers, from handout until it was swapped out or the drone came back.

17

PART 4 · BATTERIES, LOCATION TRAFFIC AND WHERE CUSTOMERS DROP OFF

Drone Funnel

How many devices reached each step between the home page and paying, the share of all devices, and where devices left. The step where the most people leave is in red: that is the page to improve. A device is counted once, with a random code kept in its browser, however many times it comes back. It is nothing that identifies a person, and it does not count your own testing.

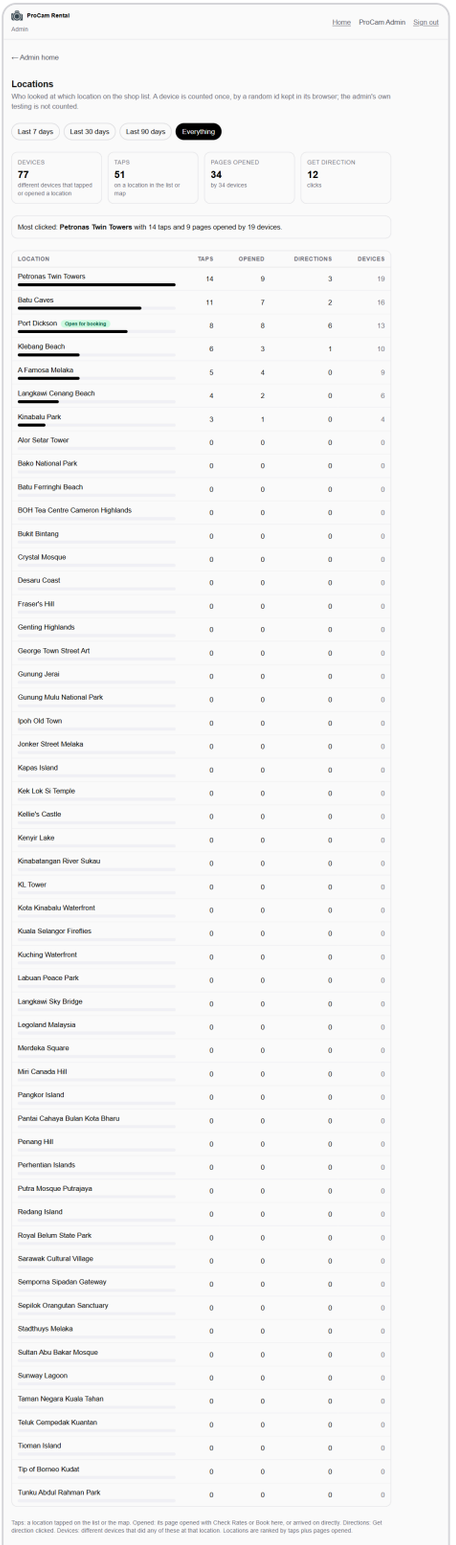

18

PART 4 · BATTERIES, LOCATION TRAFFIC AND WHERE CUSTOMERS DROP OFF

Location traffic

Which locations customers look at on the shop list: how many devices, how many taps on a location, pages opened (Check Rates or Book here) and Get direction clicks, location by location and overall, with the most clicked location on top. Use it to decide which location to open next. It counts with a random code in the browser tab and does not count your own testing.

Taps: a location tapped on the list or the map. Opened: its page opened with Check Rates or Book here, or arrived on directly. Directions: Get direction clicked. Devices: different devices that did any of these at that location. Locations are ranked by taps plus pages opened.

Part 5 · What customers see, and the messages they get

These are the things you set up for customers. Each one is shown next to what the customer sees.

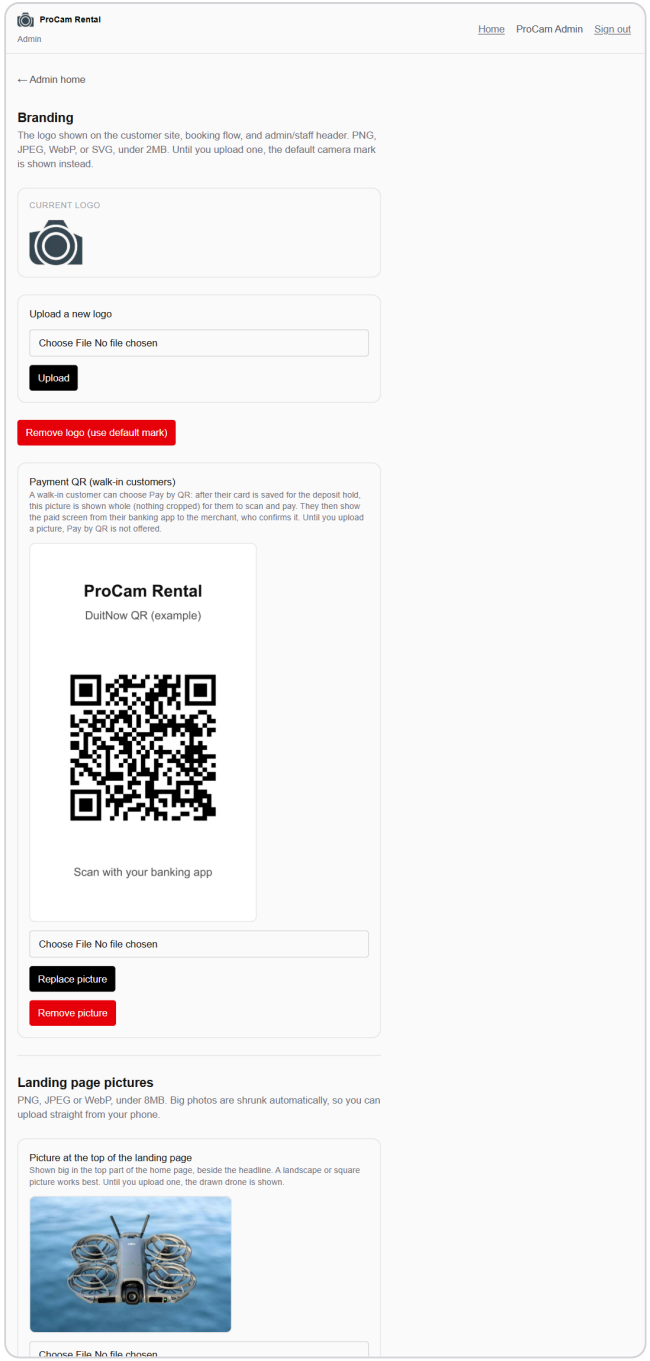

5 SCREENS

19

PART 5 · WHAT CUSTOMERS SEE, AND THE MESSAGES THEY GET

Branding

The logo, the Payment QR for walk-in customers (the picture is shown whole, never cropped; until you upload one, Pay by QR is not offered), the picture at the top of the home page, and a picture for each of the 12 booking combinations (drone, how to fly, one or two batteries).

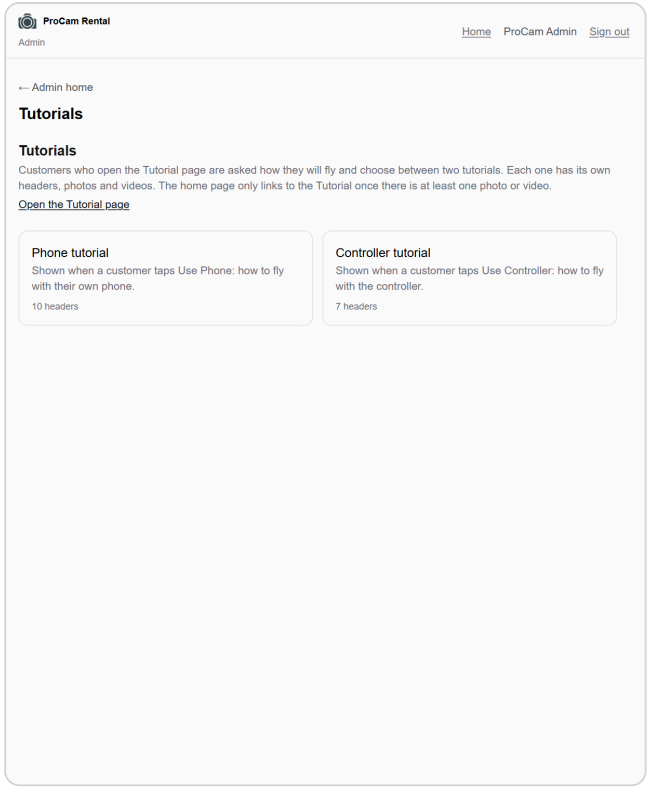

20

PART 5 · WHAT CUSTOMERS SEE, AND THE MESSAGES THEY GET

Tutorials

Add as many headers as you like and, under each, as many photos and videos as you like. Move them earlier or later, add a caption, or delete them. Photos are shrunk automatically; videos can be MP4, WebM or MOV up to 50 MB each.

21

PART 5 · WHAT CUSTOMERS SEE, AND THE MESSAGES THEY GET

How customers see the tutorial

Every photo and video is shown whole, never cropped, at the width of the phone. The home page links to it once there is at least one photo or video.

22

PART 5 · WHAT CUSTOMERS SEE, AND THE MESSAGES THEY GET

WhatsApp

Whether WhatsApp is connected, the exact text of each message to approve in Meta (English, Malay and Chinese), and a log of what was sent and whether it arrived. Customers only get messages if they ticked the box.

23

PART 5 · WHAT CUSTOMERS SEE, AND THE MESSAGES THEY GET

The WhatsApp tick box

This is where a customer chooses to get WhatsApp messages: on the details step of the booking, off until they tick it.
