ProCam admin guide: setting up and running the business

Everything the admin does: sign in, set up the locations, merchants and fleet, watch the bookings, money, batteries, location traffic and where customers drop off, and manage what customers see and the messages they get. Screens are from the admin pages on a laptop-sized window, with the customer's view next to the things the admin sets up.

Part 1 · Sign in and find your way	2 screens
Part 2 · Locations, merchants and fleet	10 screens
Part 3 · Bookings and money	10 screens
Part 4 · Batteries, location traffic and where customers drop off	3 screens
Part 5 · What customers see, and the messages they get	6 screens

Part 1 · Sign in and find your way

Only the admin sees these pages. Merchants and customers cannot open them.

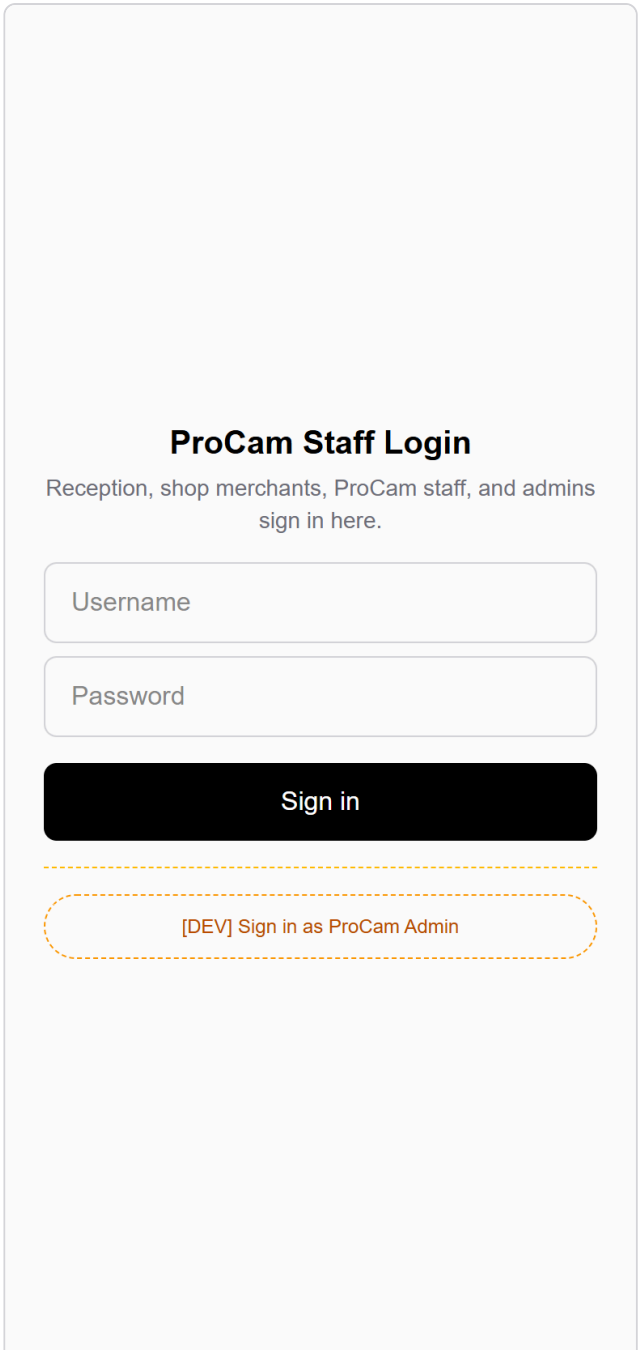

2 screens

1

PART 1 · STEP 1 OF 2

Sign in

Sign in with your admin username and password. Merchants and the admin use the same login page and land on their own page.

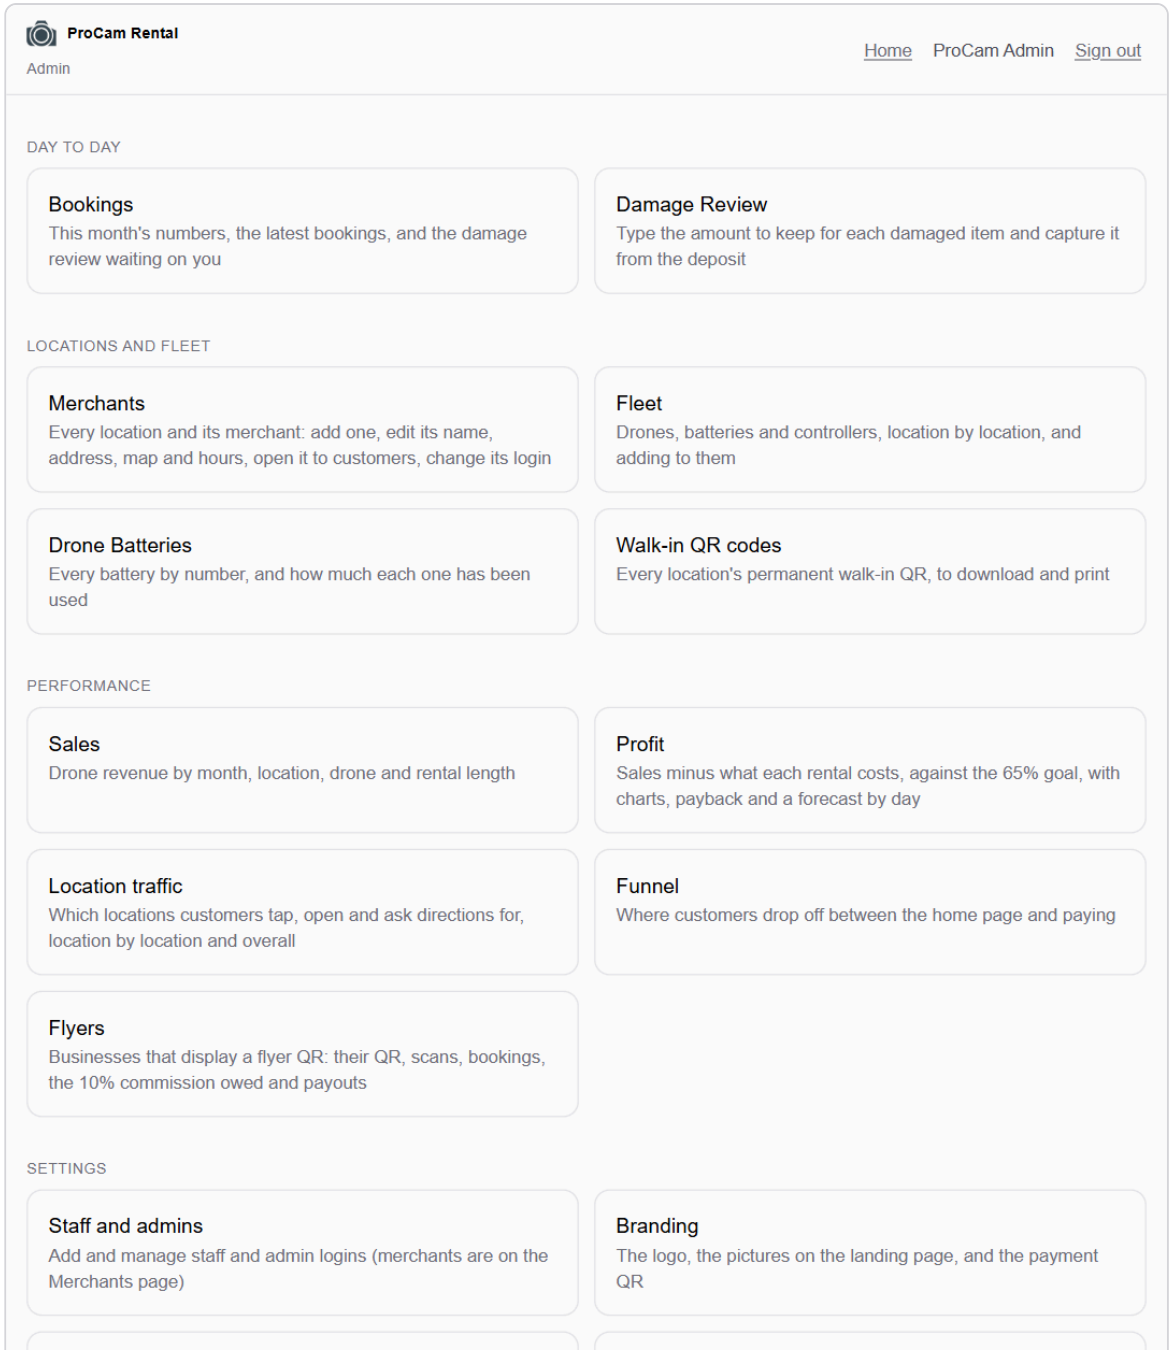

2

PART 1 · STEP 2 OF 2

Admin home

Four groups of tiles. Day to day: Bookings, and Damage Review. Locations and fleet: Merchants, Fleet, Drone Batteries, Walk-in QR codes. Performance: Sales, Profit, Location traffic, Funnel and Flyers. Settings: Staff and admins, Branding, WhatsApp and Tutorials. The older hotel locker business is paused, so its tiles and pages are hidden.

Part 2 · Locations, merchants and fleet

A merchant is a location: you create them together. Then give the location its drones and batteries and open it to customers. Set these up once, then change them when something changes.

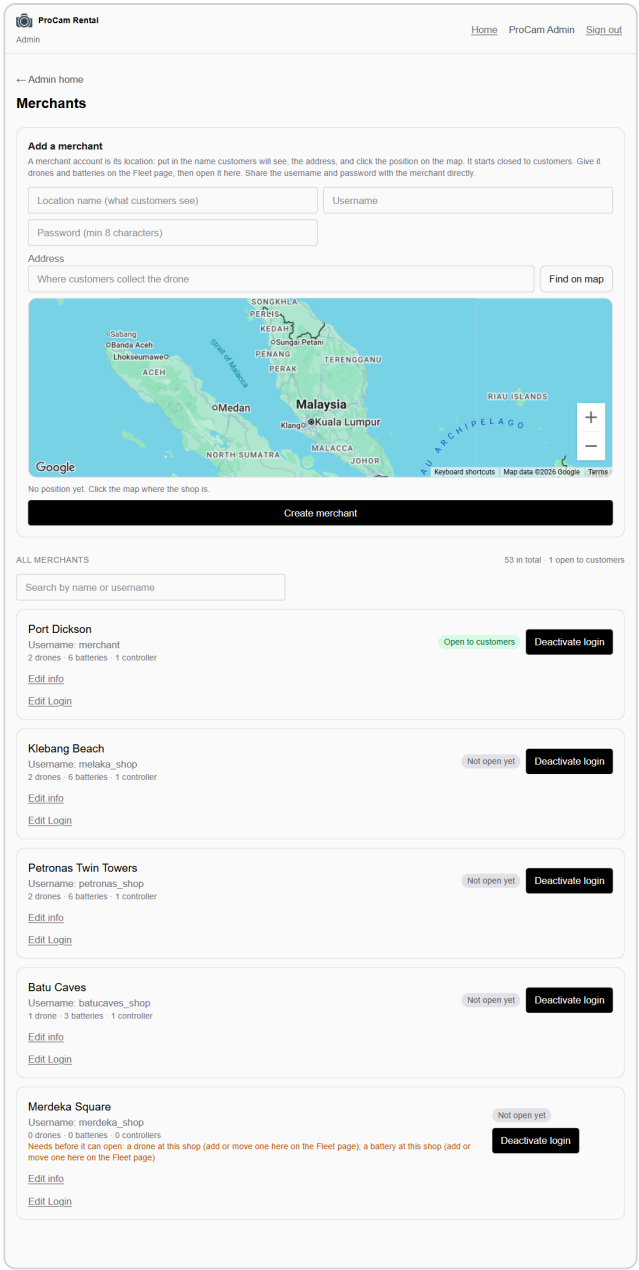

10 screens

3

PART 2 · STEP 1 OF 10

Merchants

Every location and its merchant, with a search box. Add a merchant at the top: the name customers see, a username and password, and the address, then click the position on the map (Find on map looks the address up for you). It starts closed to customers. Each row shows its username, how many drones, batteries and controllers it has, whether it is open to customers, and what it still needs before it can open.

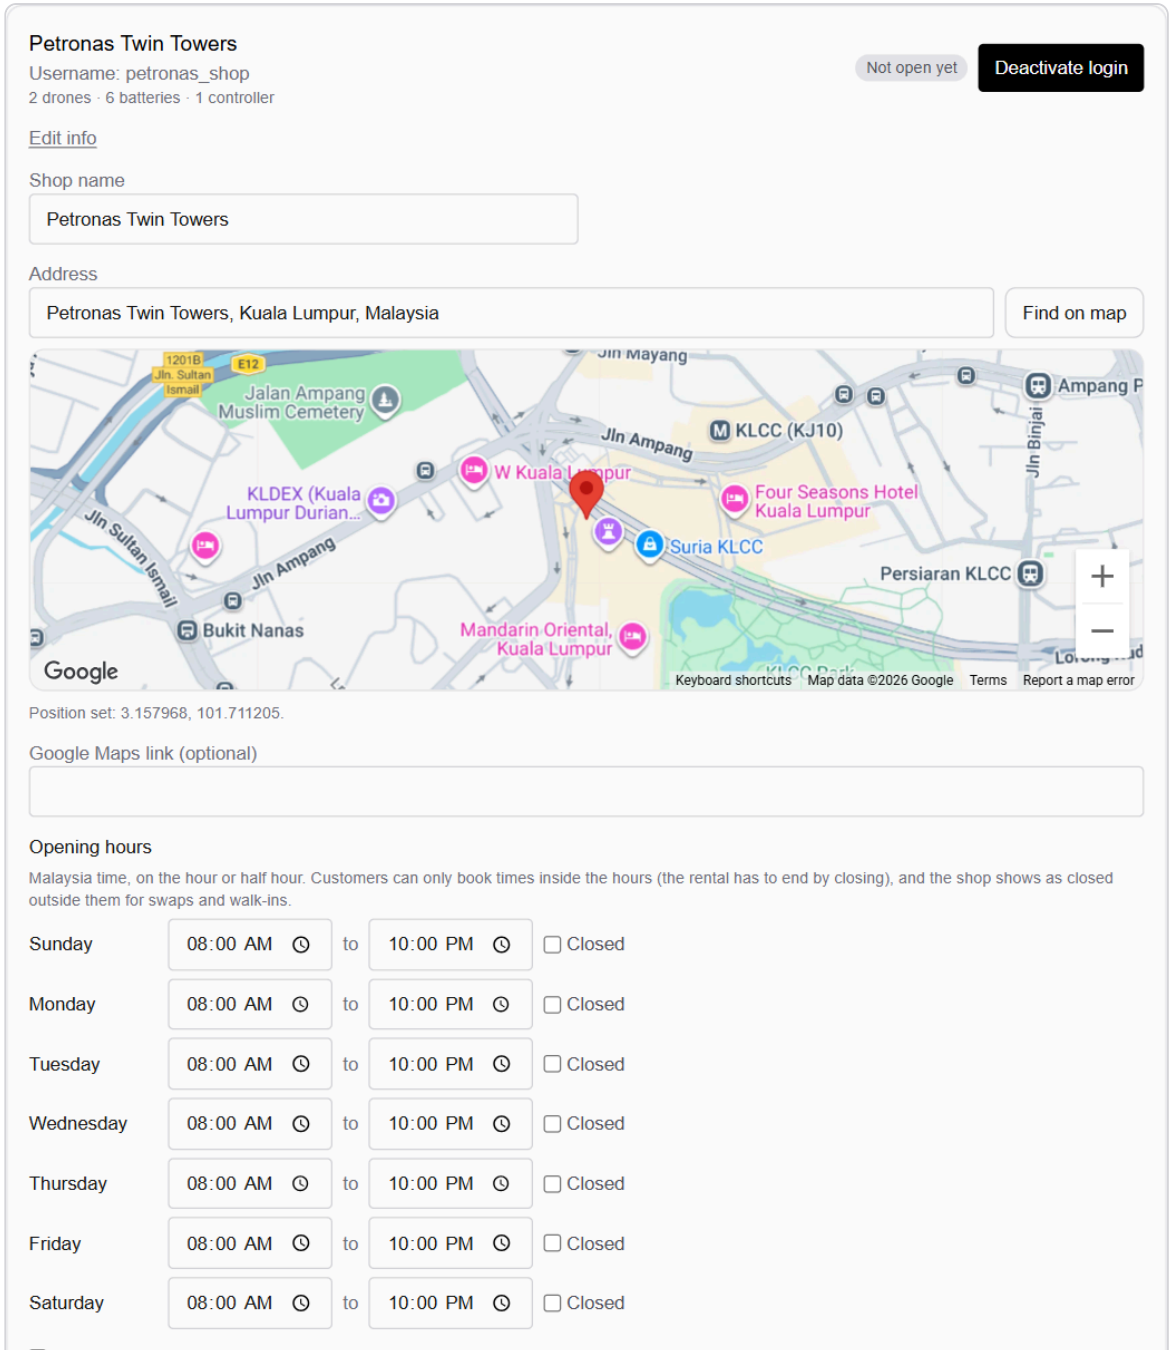

4

PART 2 · STEP 2 OF 10

Edit info

Open Edit info on a merchant to change its name, address, map position, opening hours and whether it is open to customers. The map only loads when you open the form. Edit Login changes the merchant's username or password: there is no self-service reset, you manage every login here. Type the address and pick it from Google's suggestions: the map pin and the Google Maps link fill in by themselves.

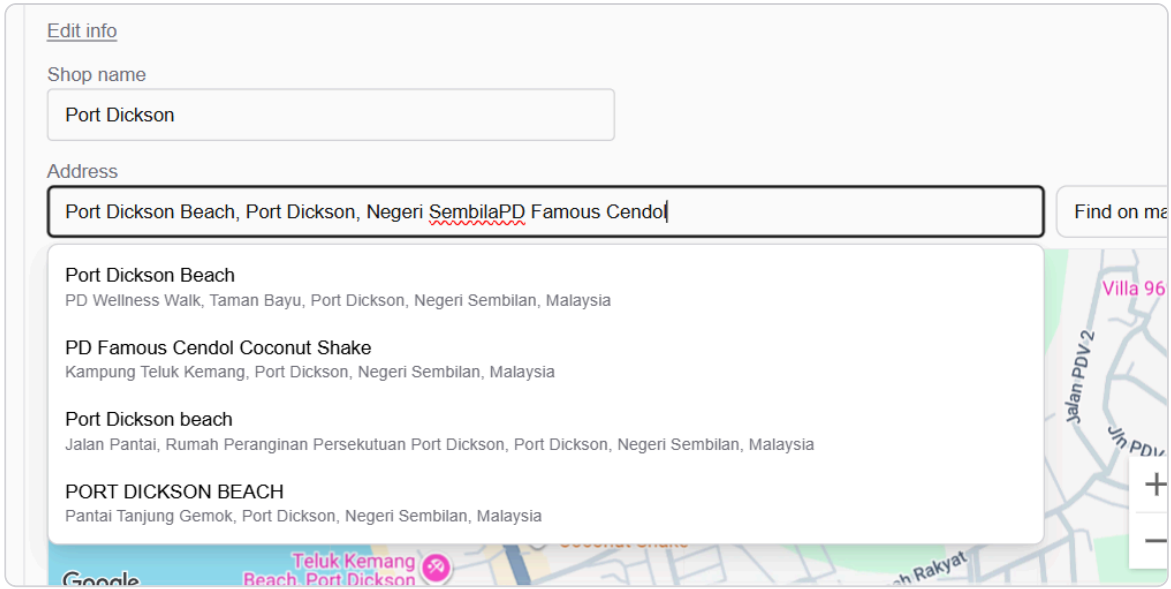

5

PART 2 · STEP 3 OF 10

Type the address, pick the place

In Edit info (and in Add a merchant), type a few letters of the address or the place. Google's suggestions drop down, for Malaysia only. Pick the right one. Nothing is saved yet.

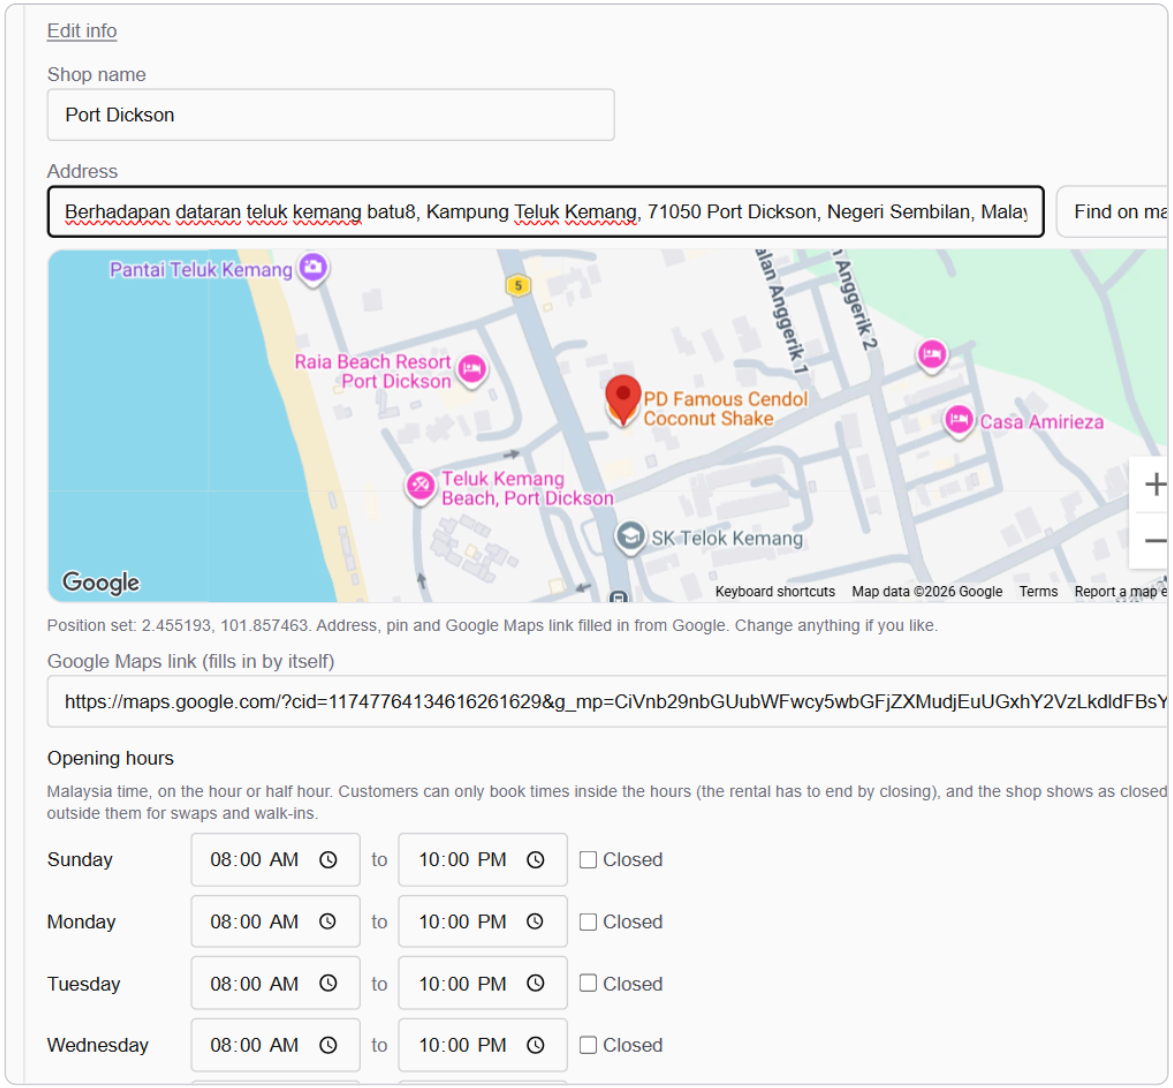

6

PART 2 · STEP 4 OF 10

Address, pin and link fill in by themselves

The address, the map pin and the Google Maps link of that exact place are filled in. Move the pin or change anything you like, then press Save info. If the suggestions are not available, Find on map and typing the link yourself still work.

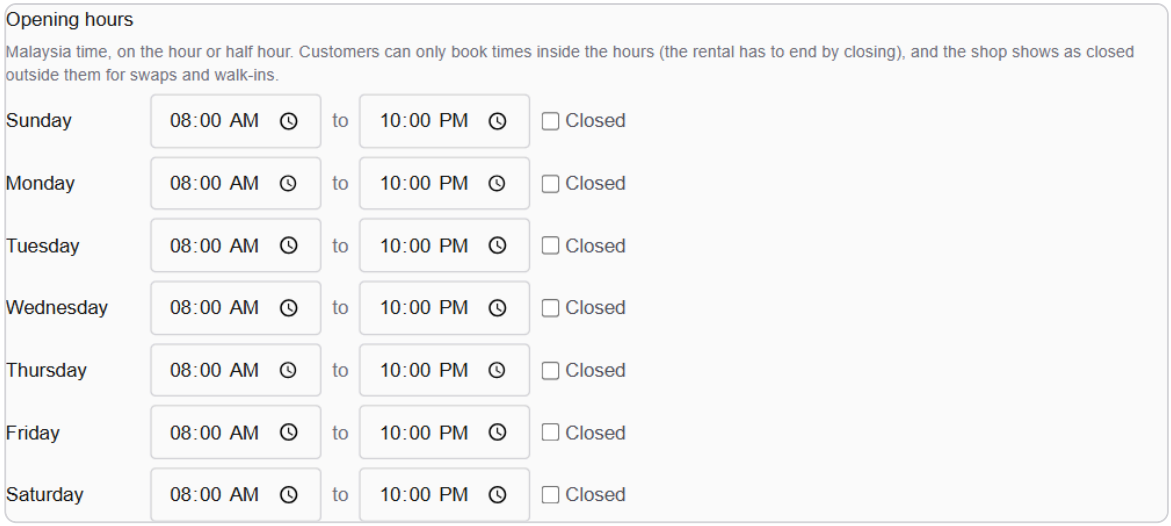

7

PART 2 · STEP 5 OF 10

Opening hours

For each location, set the opening and closing time for every weekday, or tick Closed, on the hour or half hour in Malaysia time. Customers can only book times inside the hours (the rental has to end by closing), a closed day offers no times, and a closed location shows as closed for battery swaps and walk-ins. Until you set them, a location is open 08:00 to 22:00 every day.

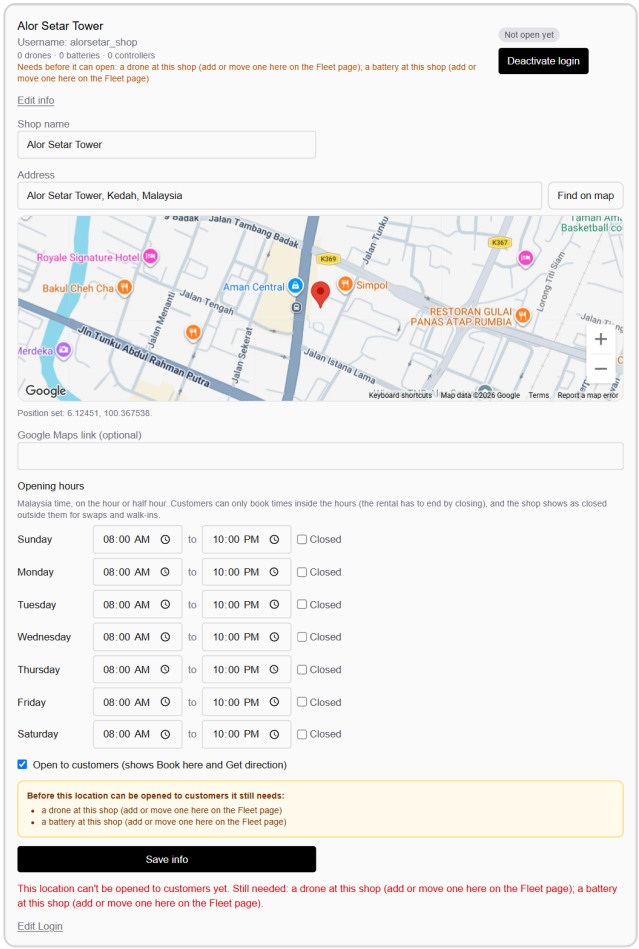

8

PART 2 · STEP 6 OF 10

Opening a location

Tick Open to customers and Save to open a location: it then shows Book here and Get direction on the shop list. It will not open until it has a real address and map position, an open day, a drone and a battery. If something is missing the save is refused and lists exactly what, in red; the amber box lists the same before you try.

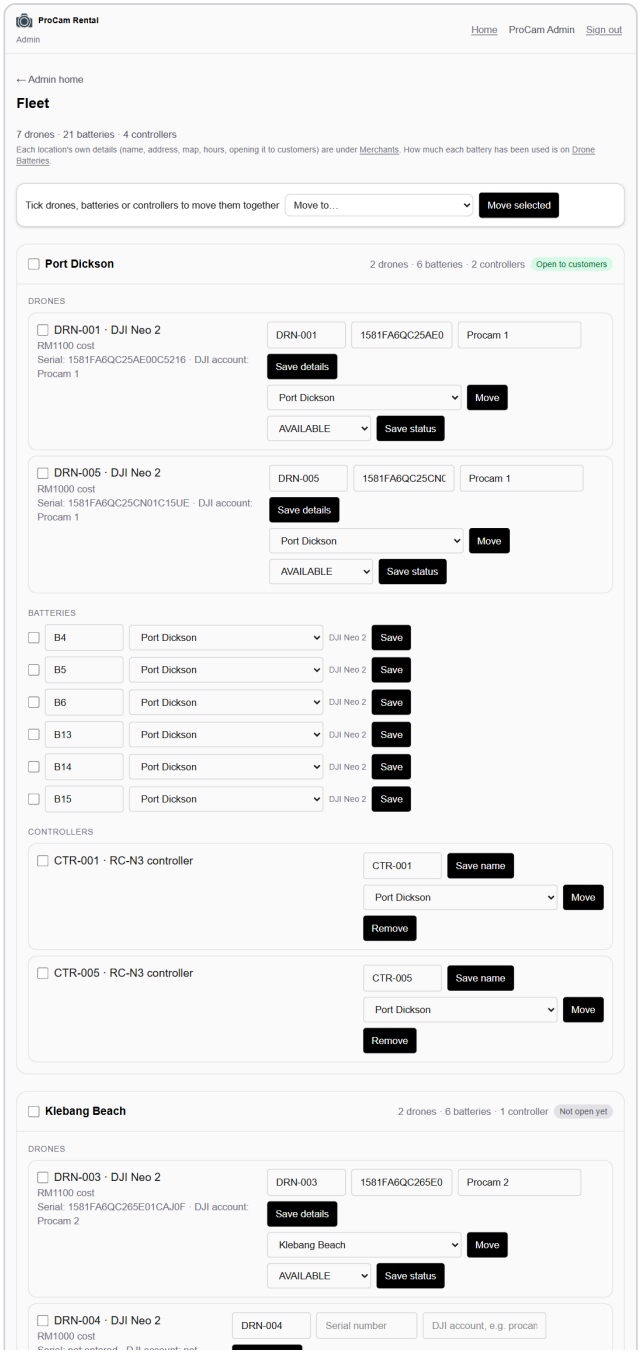

9

PART 2 · STEP 7 OF 10

Fleet

Drones, batteries and controllers, location by location, with the DJI account and serial number on each drone. Move a drone, a battery or a controller to another location, change a drone's status, and add to the fleet at the bottom. Batteries belong to a location, not to a drone, and every battery has its own number. A drone or a controller can be renamed: edit the name and save. A name that is already in use is refused.

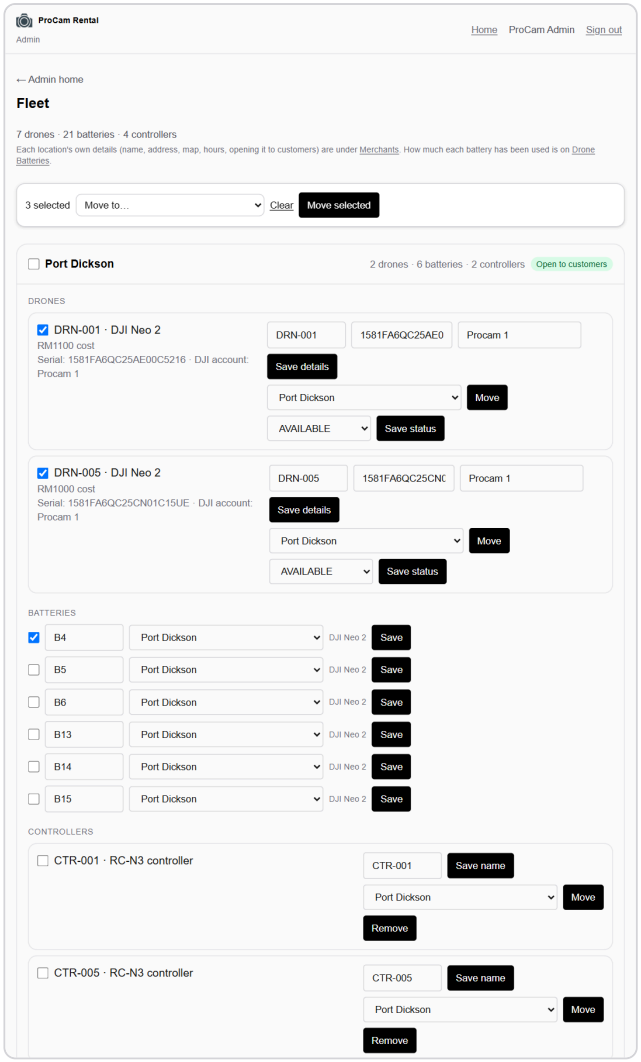

10

PART 2 · STEP 8 OF 10

Move several at once

Tick the box beside each drone, battery or controller you want to move, choose the location at the top and tap Move selected: they all go together. Clear removes the ticks.

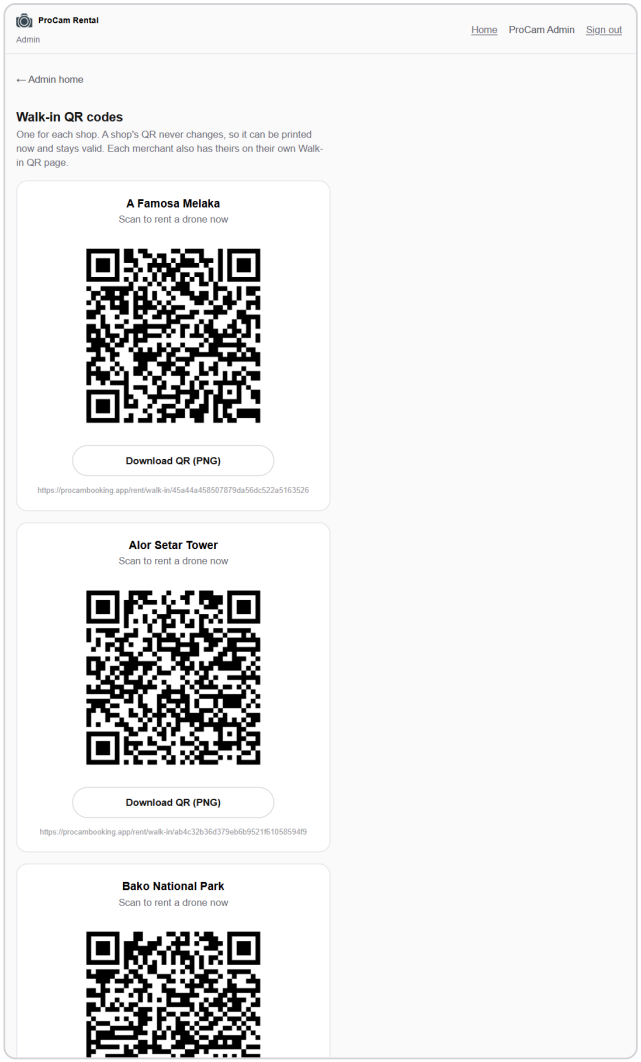

11

PART 2 · STEP 9 OF 10

Walk-in QR codes

Every location has its own walk-in QR that never changes, made from the location's permanent code. Download it as a PNG to print. A merchant has theirs on their own Walk-in QR page. Scanning the QR of a location that is not open yet shows its rates, like Check Rates.

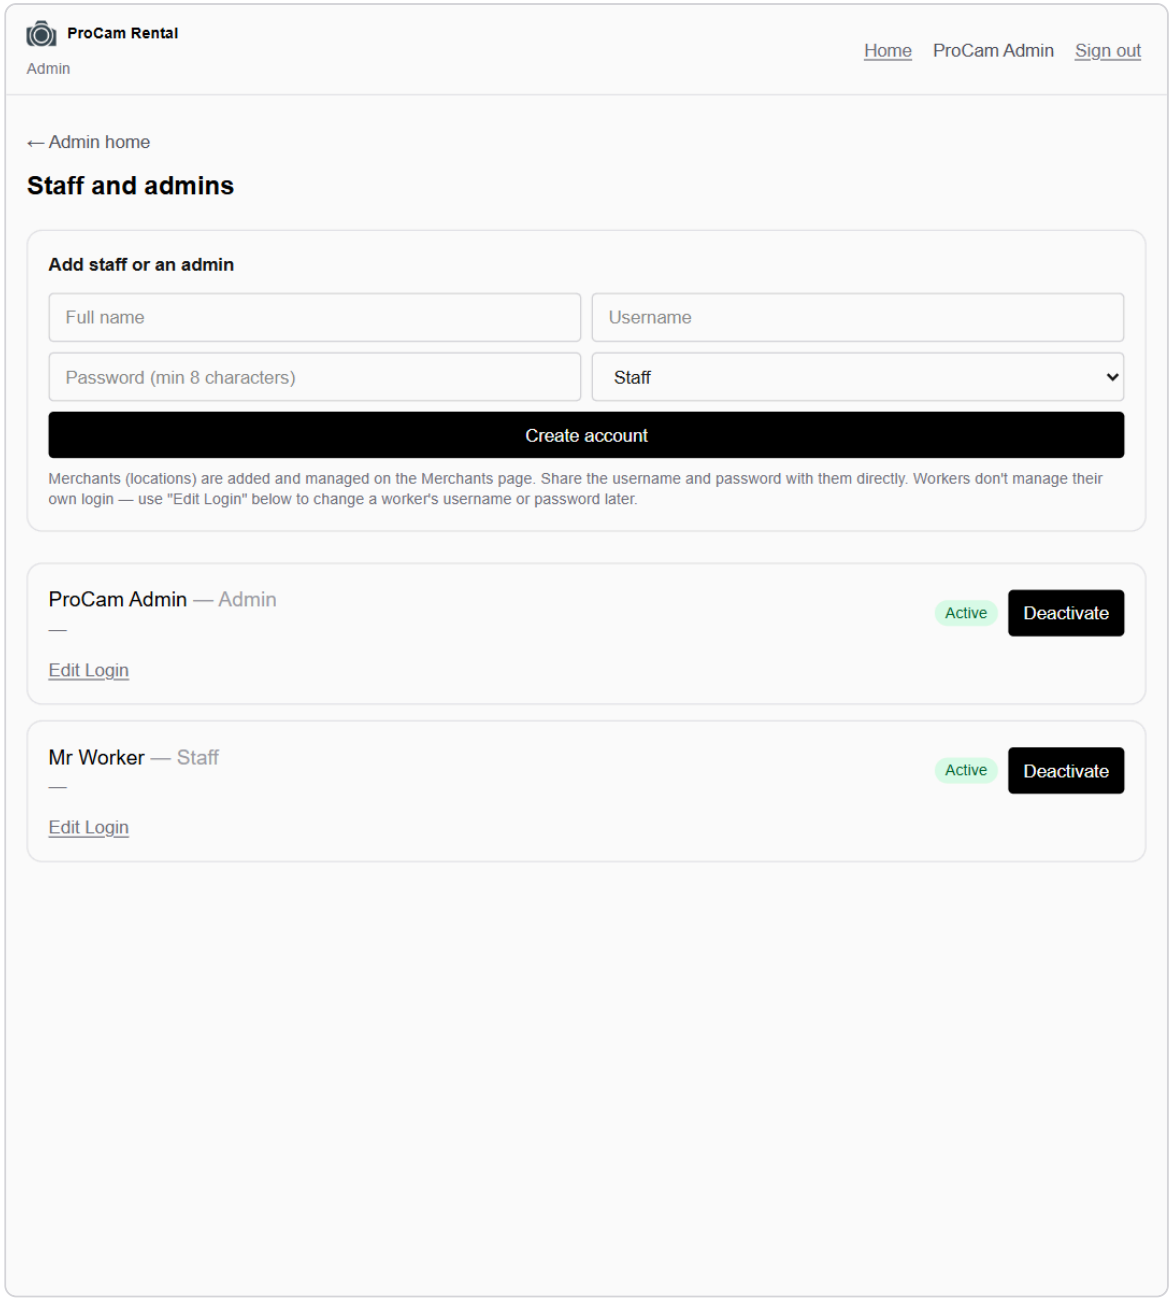

12

PART 2 · STEP 10 OF 10

Staff and admins

Logins for staff and admins: a username, a name and a password. Merchants are on the Merchants page. There is no self-service password reset, you change a login with Edit Login.

Part 3 · Bookings and money

Drone revenue only. Card payments are Stripe's; cash is recorded by the merchant.

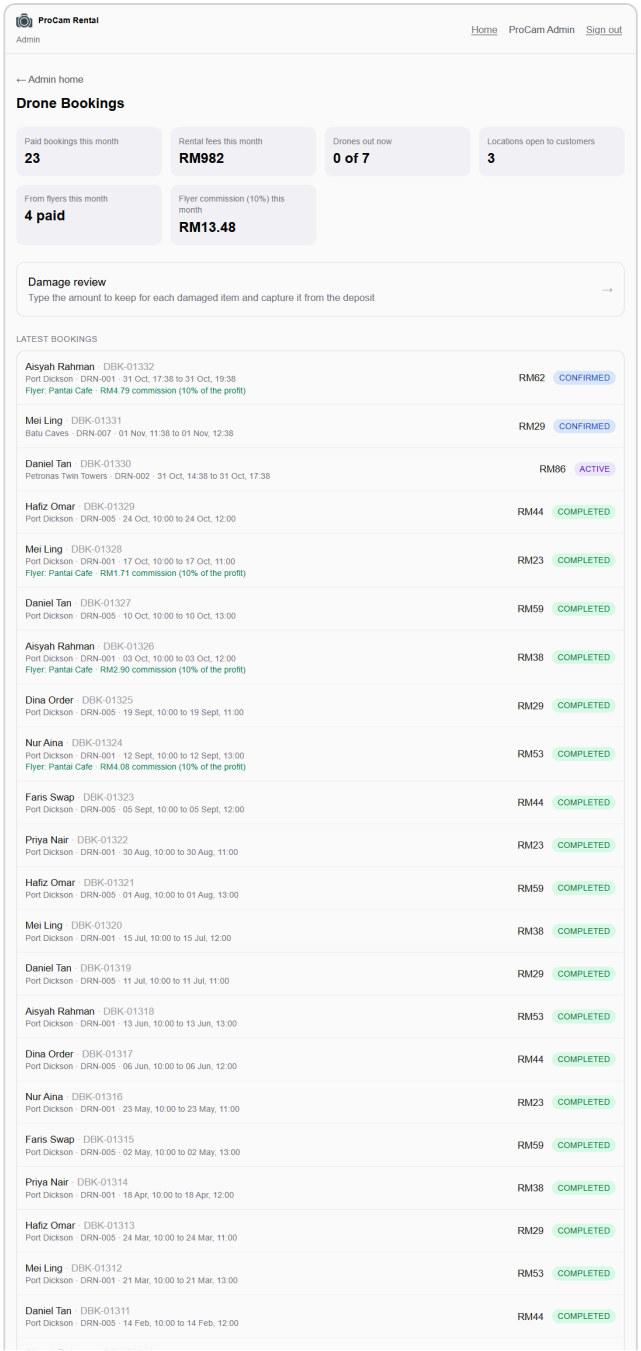

10 screens

13

PART 3 · STEP 1 OF 10

Bookings

This month in numbers (paid bookings, rental fees, drones out now, locations open, and the bookings that came from a flyer with the flyer places' 10% on them) and the latest bookings with their location, drone, time and status. A booking that came from a flyer has a green line under it with the flyer place and its commission. The Damage Review tile shows how many are waiting.

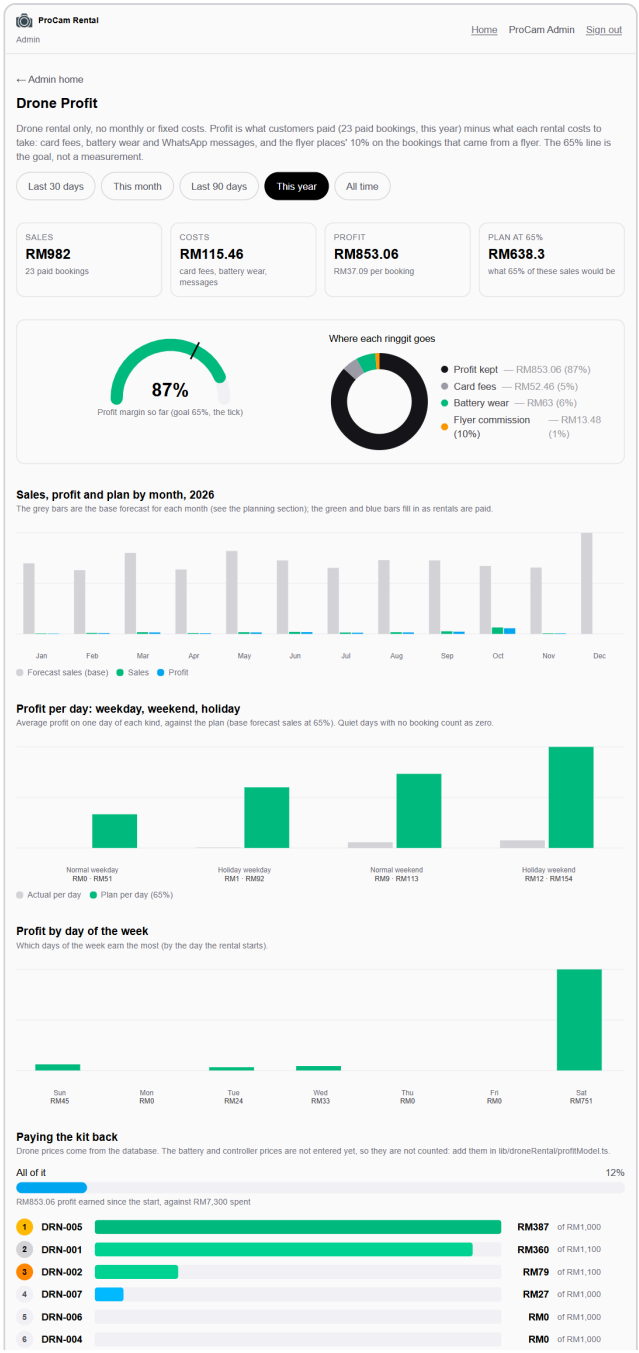

14

PART 3 · STEP 2 OF 10

Drone Profit

What is left after what each rental costs to take, shown as charts: a dial against your 65% profit goal, where each ringgit goes (card fees, battery wear, messages and the flyer places' 10% on the bookings that came from a flyer), sales and profit by month against the forecast, profit per day for a normal weekday, holiday weekday, normal weekend and holiday weekend, and how far the drones have paid for themselves. The figures here are made-up examples. There are no monthly or fixed costs in it. Under it is the planning forecast, built from Port Dickson visitor numbers, school holidays and the weather: change its assumptions in the code and the page follows.

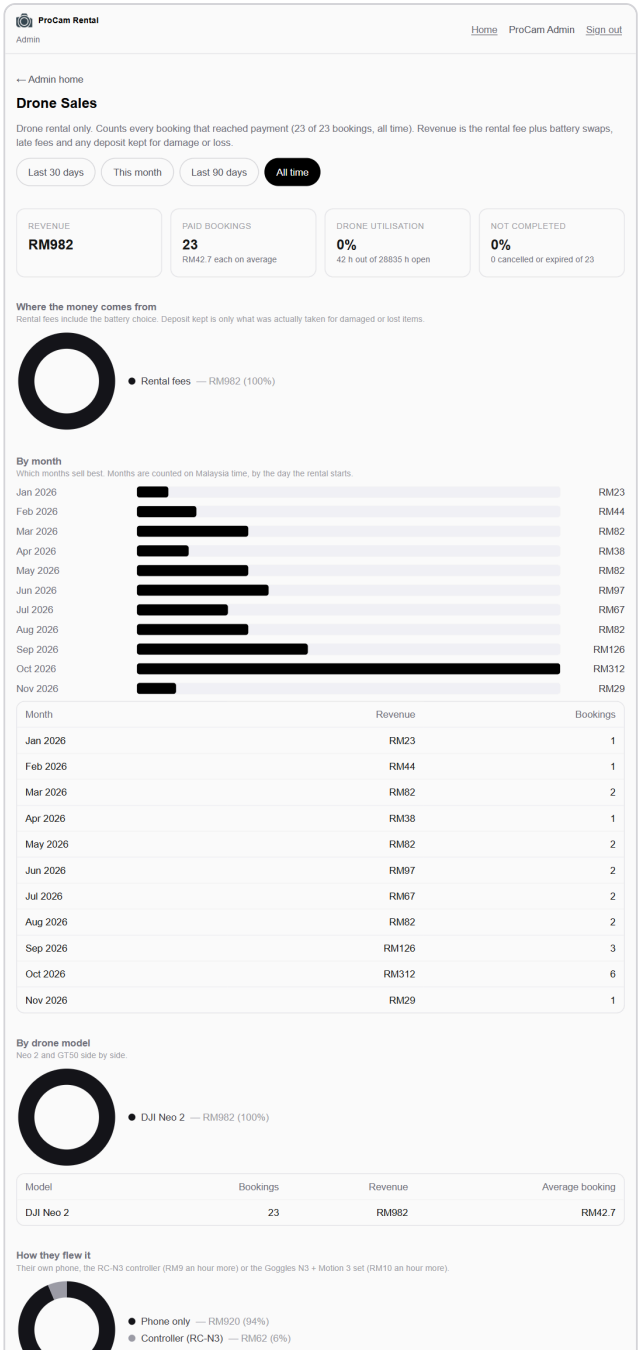

15

PART 3 · STEP 3 OF 10

Drone Sales

Revenue by month, shop, drone and rental length, with how much was card and how much cash. A table lists the bookings that came from flyers, flyer place by flyer place, with the 10% commission on them.

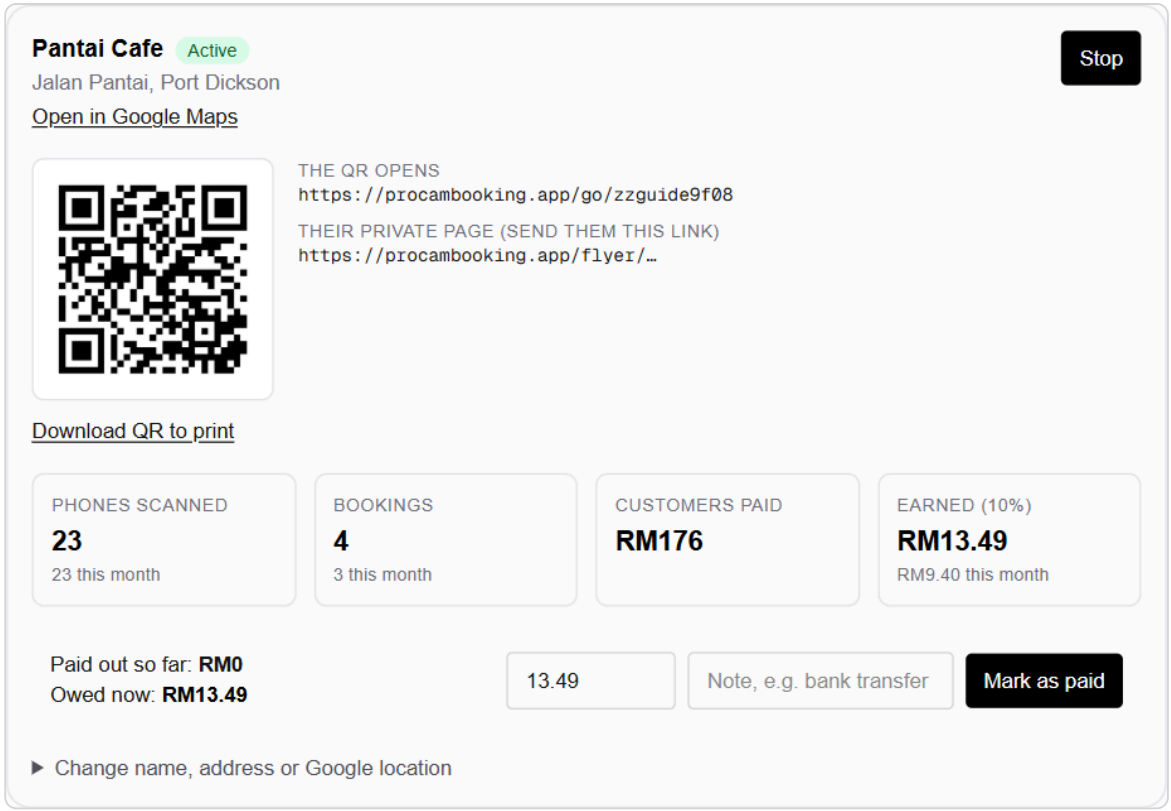

16

PART 3 · STEP 4 OF 10

Flyers

Businesses that put up a ProCam flyer with a QR code. Add a place: type its name and pick it from Google's suggestions, and the address and Google Maps link fill in by themselves. It gets a QR that never changes (Download QR to print) and a private page for the business. A phone that scans the QR is remembered for 7 days, and a booking or walk-in from that phone in that time is the flyer place's: the profit after costs is split 45% merchant, 45% ProCam and 10% flyer place, instead of 50 / 50. A phone is counted once; your own scans and test runs are not. The card shows phones scanned, bookings, what customers paid, the 10% earned, what is owed and what you paid. Mark as paid records a bank transfer you made. Change name, address or Google location re-uses a printed flyer at another shop: the QR stays the same.

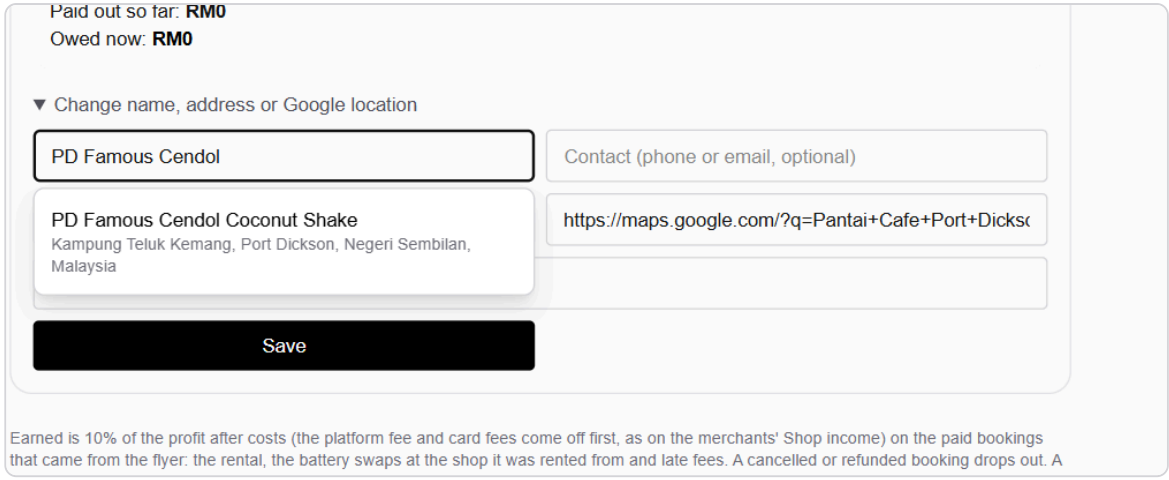

17

PART 3 · STEP 5 OF 10

Type the name, pick the place

In Add a flyer place, or in Change name, address or Google location, type a few letters of the business in the name box. Google's suggestions drop down, for Malaysia only, each with its area underneath. Pick the right one. Nothing is saved yet.

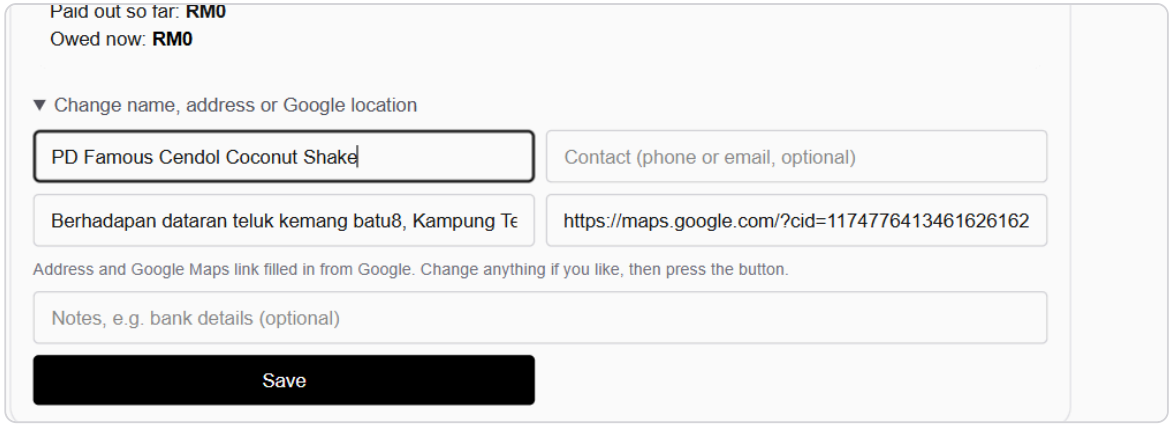

18

PART 3 · STEP 6 OF 10

Address and link fill in by themselves

The name, the address and the Google Maps link of that exact place are filled in. Change anything you like (the contact and notes are yours to add), then press Save. If Google's suggestions are not available, you can still type all of it yourself.

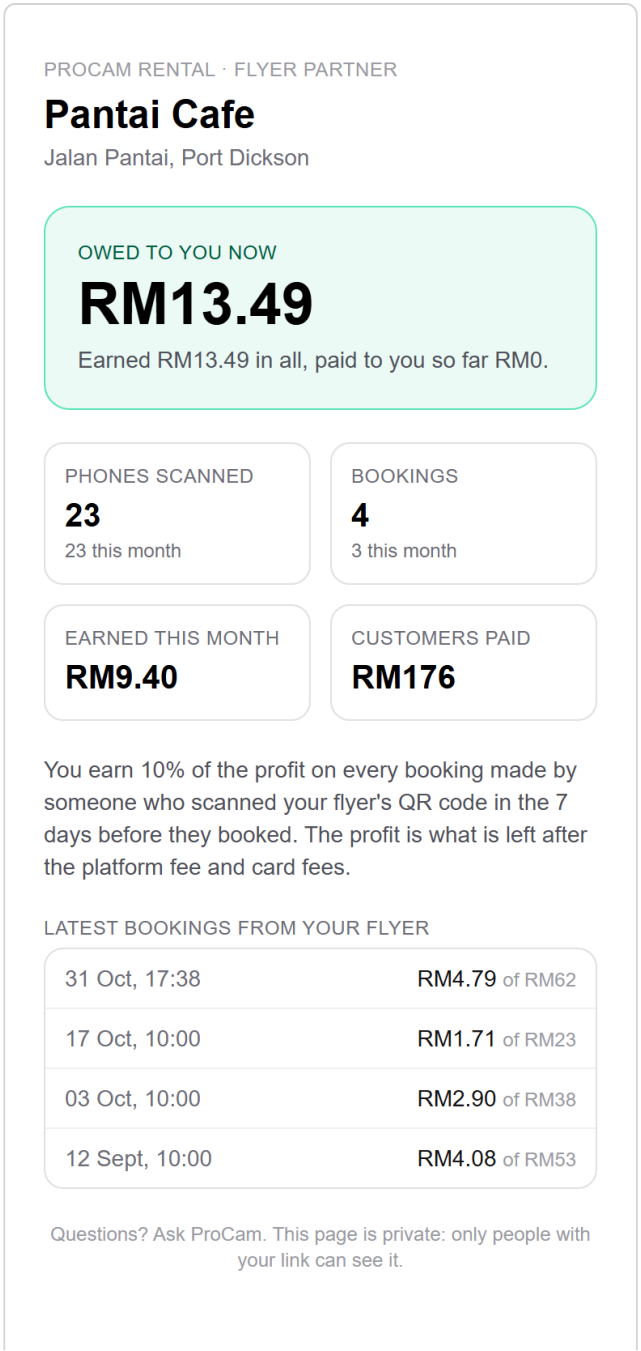

19

PART 3 · STEP 7 OF 10

The flyer place's own page

The private link on each card opens a page for that business only: what it is owed now, phones scanned, bookings, what it earned this month and its latest bookings. Send it to them. Only people with the link can see it.

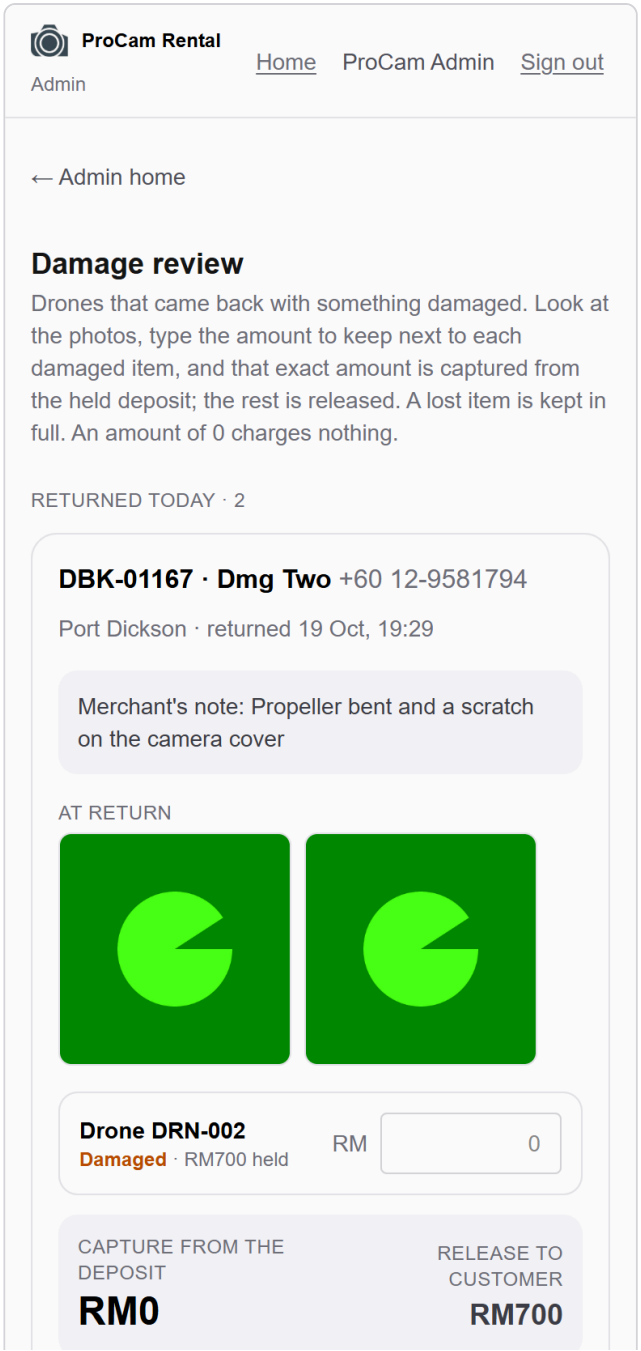

20

PART 3 · STEP 8 OF 10

Damage review, every night

Returns where something was damaged wait here. The merchant only describes the damage at the return; the deposit stays held until you decide.

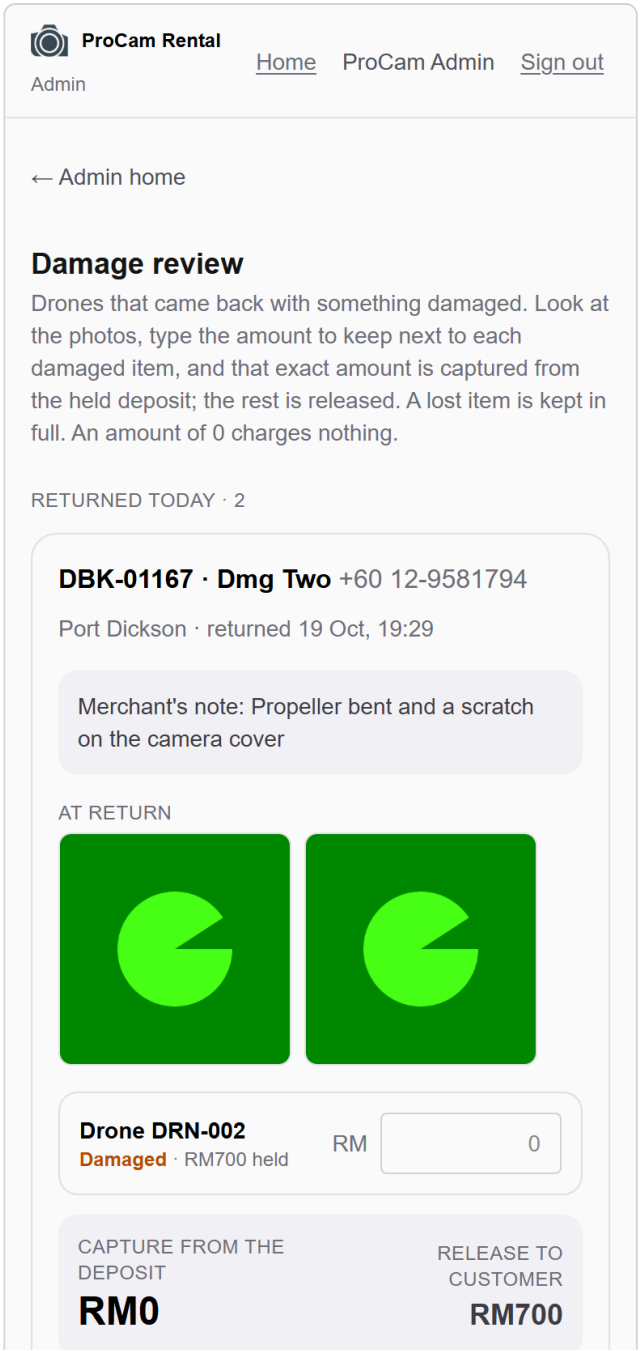

21

PART 3 · STEP 9 OF 10

Type the amount, then capture

Type what to keep for each damaged item. That total is captured from the held deposit and the rest is released. A lost item is kept in full.

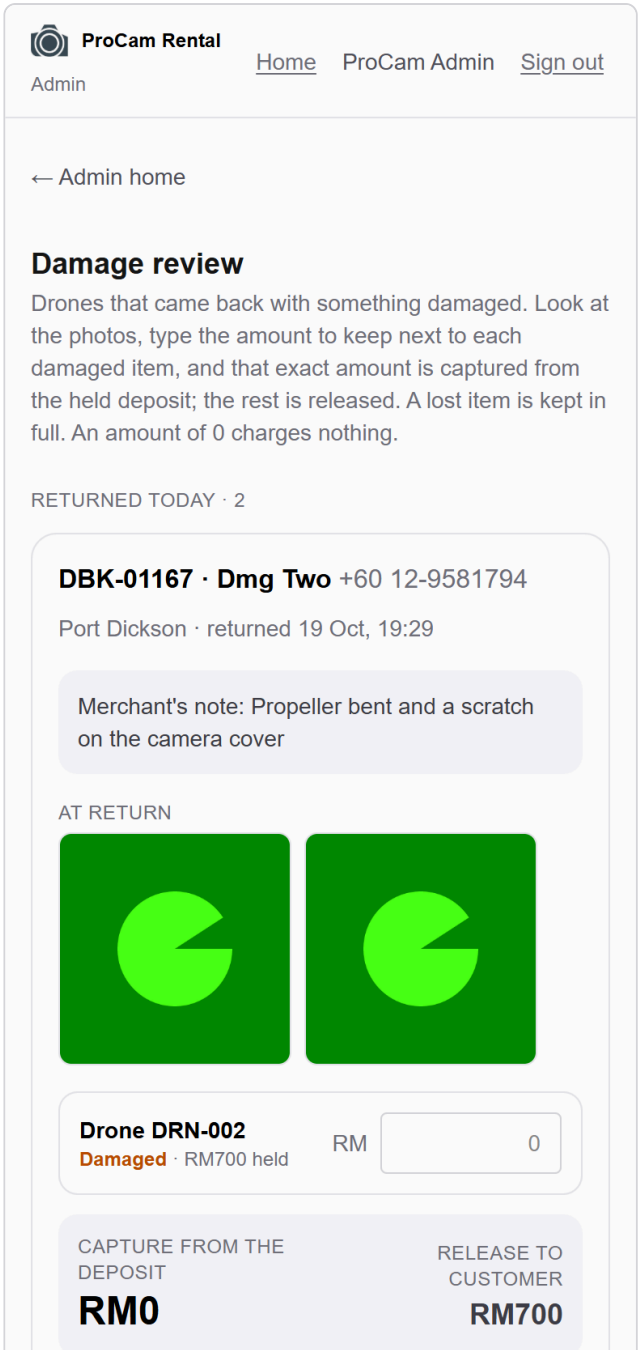

22

PART 3 · STEP 10 OF 10

Damage above the deposit

If the repair costs more than the deposit that is held, only the held amount can be captured, and the screen says so.

Part 4 · Batteries, location traffic and where customers drop off

Both pages count from the day they went live.

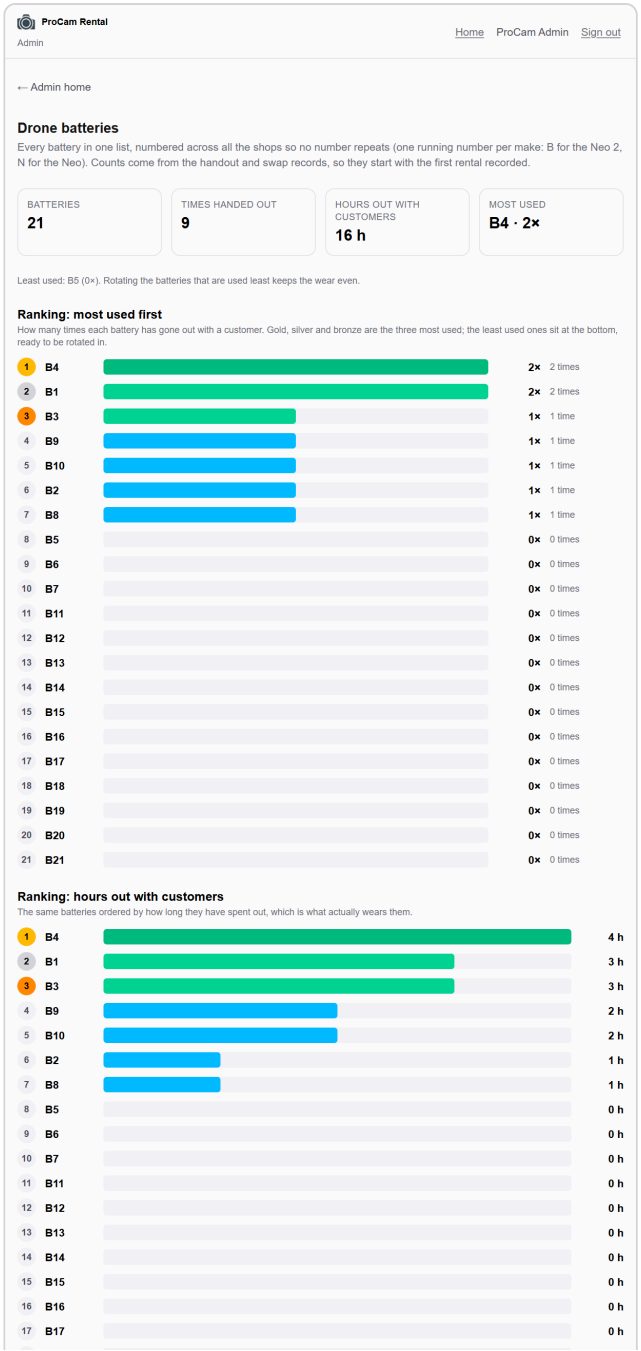

3 screens

23

PART 4 · STEP 1 OF 3

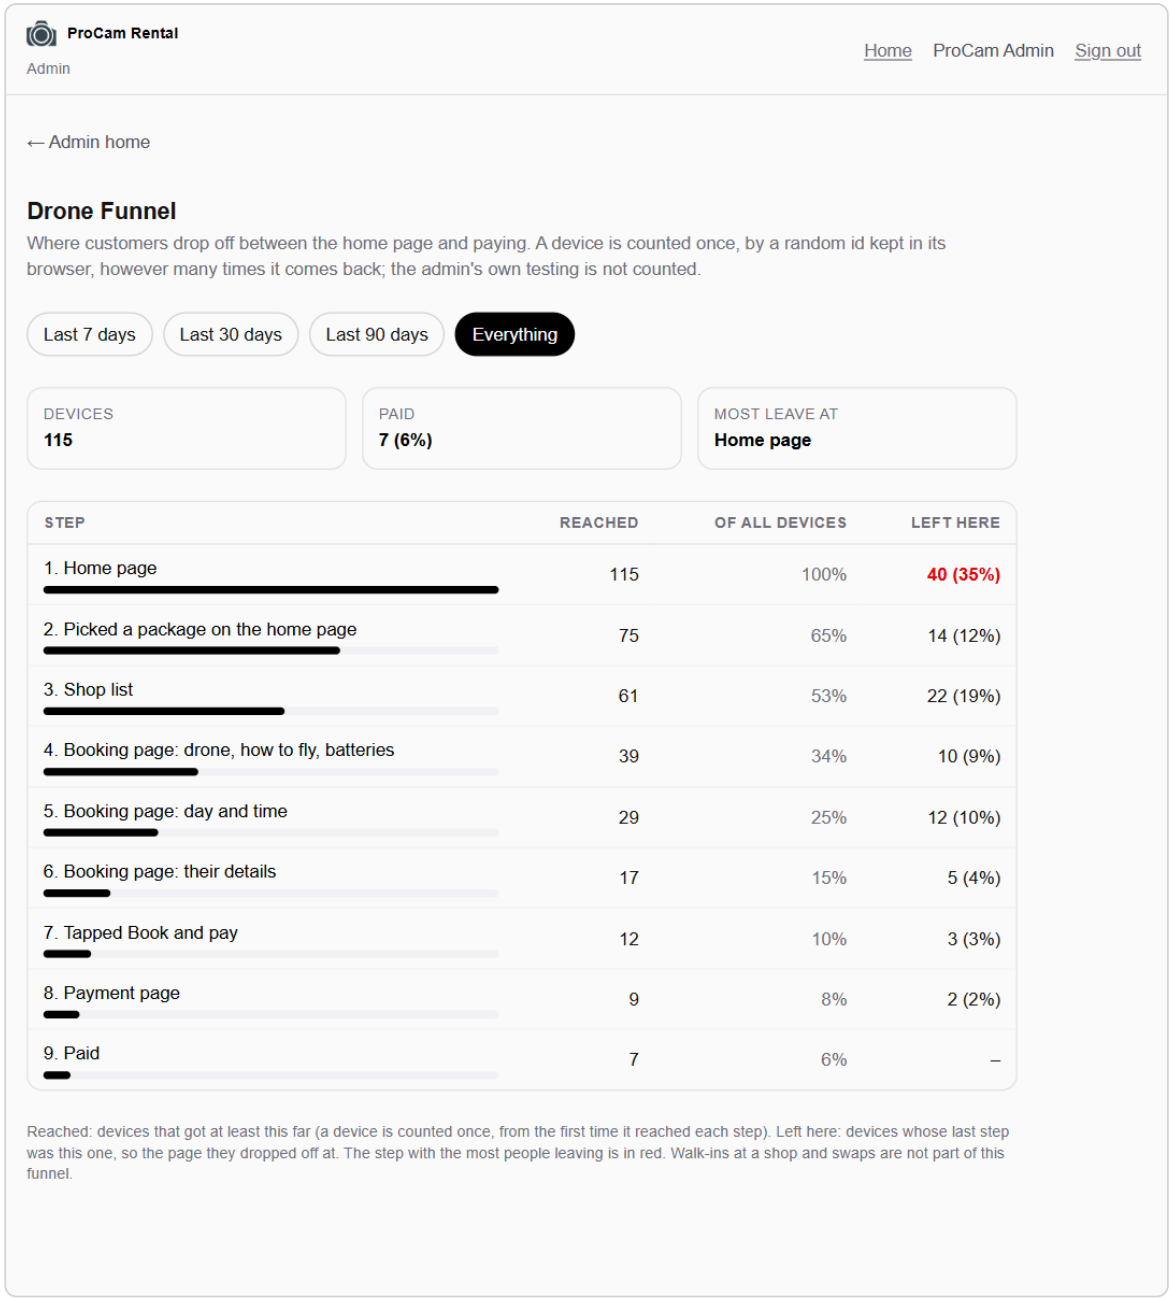

Drone Batteries

Two ranking charts come first: the batteries ordered by how many times each went out with a customer, and by the hours each has spent out, with gold, silver and bronze for the three most used. Below them, every battery in one list, numbered with no number repeated (B for the Neo 2, N for the Neo). For each: where it is now, how many times it went out with a customer, the rentals it was on, how many of those were swaps, the hours it has spent out, and when it was last out. Rotate the batteries that are used least to keep the wear even. Change the stickers to match the numbers.

Drone Funnel

How many devices reached each step between the home page and paying, the share of all devices, and where devices left. The step where the most people leave is in red: that is the page to improve. A device is counted once, with a random code kept in its browser, however many times it comes back. It is nothing that identifies a person, and it does not count your own testing.

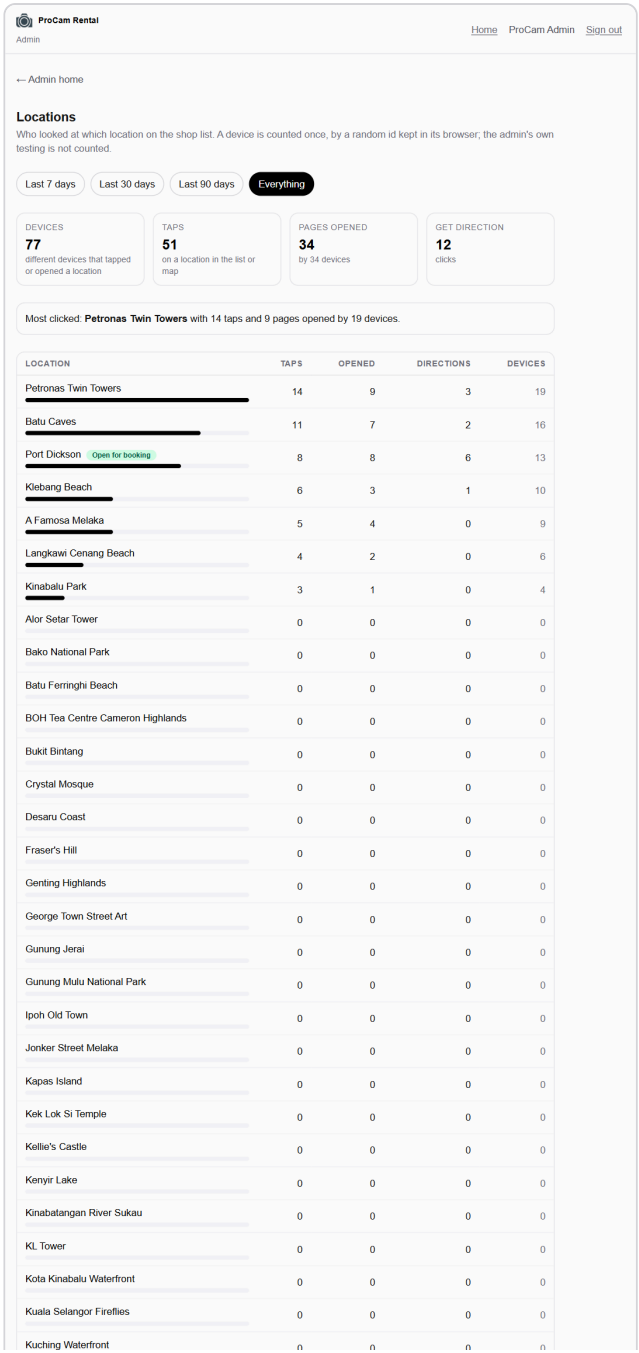

25

PART 4 · STEP 3 OF 3

Location traffic

Which locations customers look at on the shop list: how many devices, how many taps on a location, pages opened (Check Rates or Book here) and Get direction clicks, location by location and overall, with the most clicked location on top. Use it to decide which location to open next. It counts with a random code in the browser tab and does not count your own testing.

Part 5 · What customers see, and the messages they get

These are the things you set up for customers. Each one is shown next to what the customer sees.

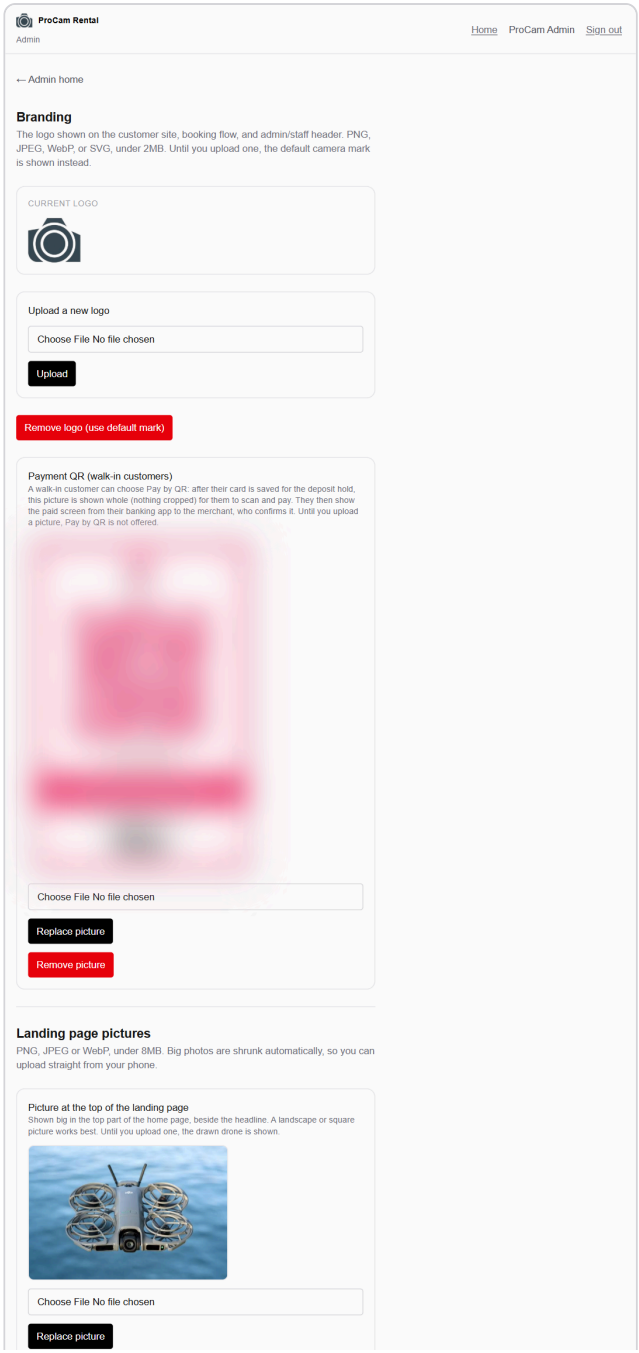

6 screens

26

PART 5 · STEP 1 OF 6

Branding

The logo, the Payment QR for walk-in customers (the picture is shown whole, never cropped; until you upload one, Pay by QR is not offered; it is blurred here), the pictures on the home page, and a picture for each booking combination (drone, how to fly, one or two batteries).

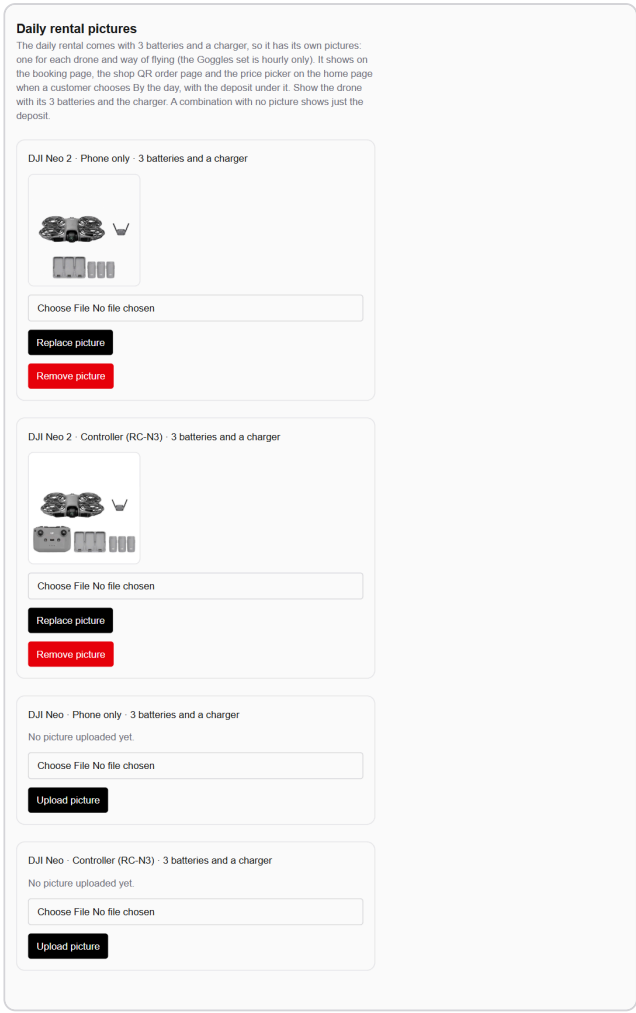

27

PART 5 · STEP 2 OF 6

Pictures for a booking by the day

A booking by the day comes with 3 batteries and a charger, so it has its own pictures: one for each drone and way of flying (the goggles set is hourly only). They show on the booking page, the shop QR order page and the price picker on the home page when a customer chooses Day. A combination with no picture shows just the drone.

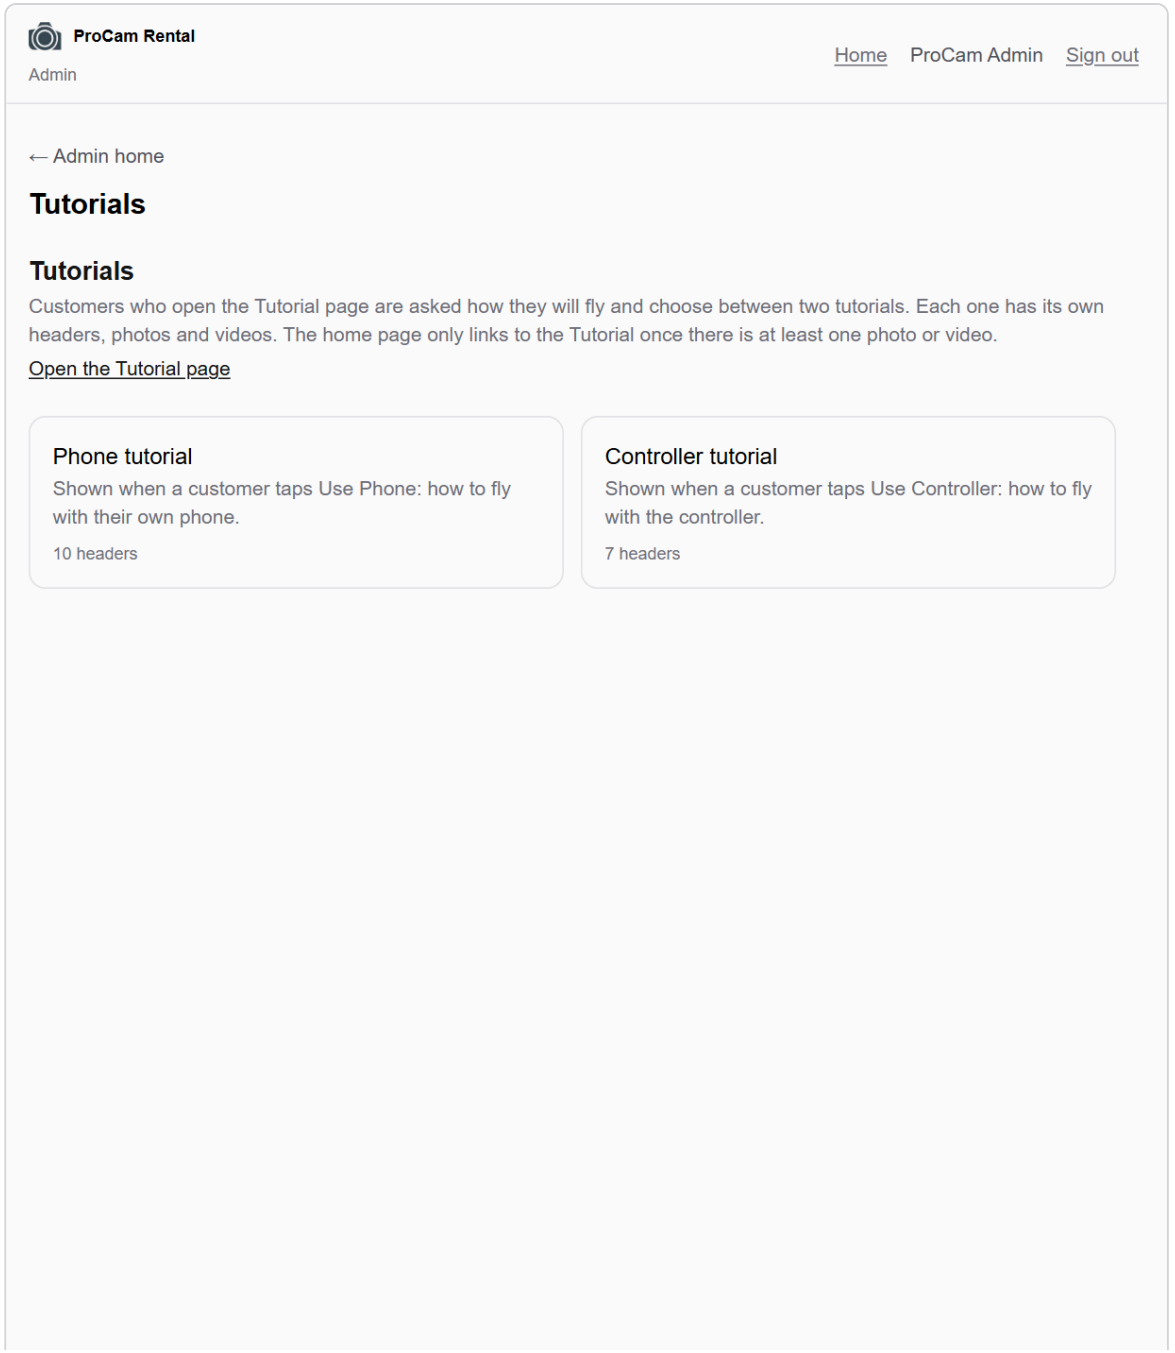

28

PART 5 · STEP 3 OF 6

Tutorials

Add as many headers as you like and, under each, as many photos and videos as you like. Move them earlier or later, add a caption, or delete them. Photos are shrunk automatically; videos can be MP4, WebM or MOV up to 50 MB each.

29

PART 5 · STEP 4 OF 6

How customers see the tutorial

Every photo and video is shown whole, never cropped, at the width of the phone. The home page links to it once there is at least one photo or video.

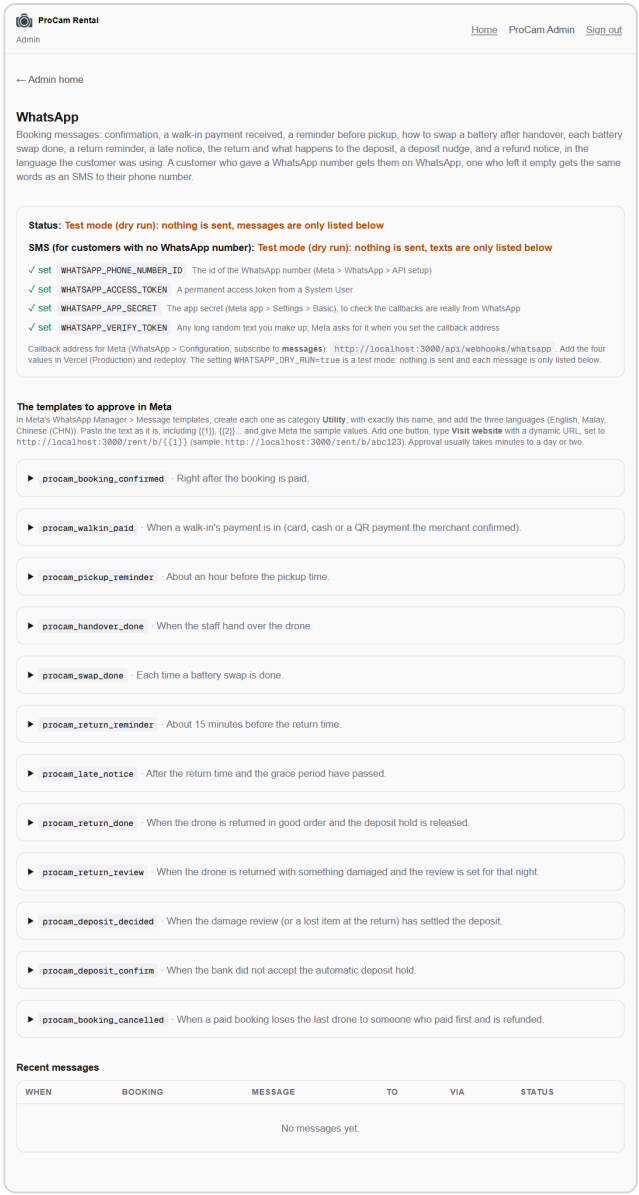

30

PART 5 · STEP 5 OF 6

WhatsApp

Whether WhatsApp is connected, the exact text of each message to approve in Meta (English, Malay and Chinese), and a log of what was sent and whether it arrived. Customers only get messages if they ticked the box.

31

PART 5 · STEP 6 OF 6

The WhatsApp tick box

This is where a customer chooses to get WhatsApp messages: on the details step of the booking, off until they tick it.
